CT, CTL SERIES

"ACOUSTA-MASTER" SOLID STATE PACKAGED AMPLIFIERS

Unique among packaged PA amplifiers, Bogen "CT" series features built-in controls to overcome two of the major problems encountered in public address applications. Acousta-Master equalizer filter circuitry permits boosting or attenuating any of five selected frequencies to "tune out" acoustic feedback. An electronic compressor assures uniform output regardless of input level variations such as result from poor microphone technique.

Using silicon transistors and diodes exclusively, the "CT" amplifiers offer unmatched features and performance to serve applications that once required custom equipment. The "CTL" models are identical to their "CT" counterparts, but furnished with a built-in 200-ohm transformer for use with low-impedance microphones.

FEATURES

- Five equalizer filters with slide controls provide unique anti-feedback and tone-control circuit.
- Built-in electronic limiter, adjustable by front panel control, assures constant output for a wide variation in input.
- Volume of two MIC and one AUX channels can be controlled from remote point by means of LVP and RVC-2 accessories.
- MIC precedence on two MIC and one AUX channels with LVP.
- Self-restoring cutout in output circuit protects power transistors.
- Plug-in transformer provides balanced microphone inputs at 50, 200 and 500 ohms in CT Series amplifiers.
- CTL Series amplifiers supplied with built-in 200 ohm transformer for balanced low-impedance microphone input.
- All solid state amplifier; silicon transistors and diodes used exclusively.
- 500/600Ω telephone line can be fed either to input or from output by use of accessory WMT-1 transformer.
- Rack panel kit available for rack mounting.
- Line cord terminated in three-prong plug provides automatic grounding of amplifier.
- Three-conductor broadcast type connectors provided for input of each MIC channel.
- Two phone-type quick-disconnect jacks provided for speaker outputs.
- Two similar amplifiers can be bridged together to increase number of inputs and parallel outputs.
- High-level tape outputs provided both before and after equalizer controls.

P.A. LOUDSPEAKERS

PS SERIES

12 w. AND 25 w. SPEAKERS FOR SPEECH, TALKBACK

The PS Series includes 15 models (6 shown here). All are designed for speech reproduction and talkback, and characterized by unusually high intelligibility. Unibody construction, using precision machined parts finished to minute tolerances, results in accurate and concentric sound paths for extremely high efficiency and even response. Sturdy and unique Universal Mounting Bracket permits instant installation. The 25 w. models in this series share two significant features: 25 w. Continuous Power Handling Capacity and 250 Hz Low Frequency Cut-off, permitting reproduction of non-critical music as well as speech. Two models (directional and wide-angle) offer built-in transformers — save hours and dollars on most installations. This series offers the widest choice of features such as size, dispersion pattern (wide angle or directional), built-in transformers. You'll find the one right horn speaker for your speech reproduction requirement in the PS Series.

	PS-10	PSW-10	PS-25	PS-25T	PSD-25	PSW-25T

D SERIES ECONOMY DRIVER UNITS

These driver units offer excellent performance and power-handling capacities. The economical D-30 features sturdy binding posts which permit instant connect-and-disconnect while heavy aluminum case provides permanent sealing against weather. Trouble-free performance and unusually high efficiency through the all-important middle range of frequencies where intelligibility and clarity are conveyed.

EXTENDED RANGE DELUXE DRIVER UNITS

Truly in the "luxury" class, these drivers are characterized by extended-range reproduction of extreme highs for clarity and fidelity, extreme lows for pleasing tones. All disturbing dips and peaks have been removed for a smooth level response. Models in this series feature sturdy die cast cases, gasketed and weatherproof, and incorporate built-in rear molded waterproof terminal blocks, eliminating the twin problems of corrosion and leakage at unsightly binding posts. The exclusive Self-Install Diaphragm assembly permits in-the-field replacement in the unlikely instance of voice coil damage.

HM SERIES DIRECTIONAL HORNS

Bogen's directional trumpets with design features that set a new high for performance. In reentrant models (2 shown below) meticulous attention to the critical areas where the air column bends gives **Bogen** horns extremely high efficiency. Fideliflare® design greatly improves low frequency response, eliminates harshness so often present in Public Address installations. Solid steel mounting brackets, heavy aluminum components and a baked finish assure a lifetime of trouble-free performance.

HWA SERIES WIDE-ANGLE HORNS

Horns in this series utilize **Bogen's** exclusive Cobra-Flare® dual air column and twin horn design. Sound is effectively divided into two separate air columns radiating at an angle to each other. An extremely wide horizontal area is thus covered with minimum loss of sound energy up or down. Horns are solid aluminum castings which effectively eliminate side wall vibration and resonance losses . . . resulting in an output at least 3 db greater than that from any other horn with the same input.

	HM-25	HM-35	HWA-30
	 Highly efficient over a wider range for excellent speech projection and non-critical music reproduction.	 True wide range reproduction makes the HM-35 satisfactory for most high power public address applications requiring reproduction of speech and music. P.A. LOUDSPEAKERS

HF SERIES

OUTDOOR HIGH FIDELITY SPEAKERS FOR MUSIC & PUBLIC ADDRESS

These models combine the quality of an expensive hi-fi console with the projection and throwing power of a reflex horn speaker. True full-range hi-fi sound reproduction with brilliant highs, resonant full-bodied lows — indoors, outdoors, even in high noise areas. Weather-resistant, HF models are ideal for background music systems in factories — for all uses in theatres, churches, auditoriums, beach clubs — or at your own patio, garden or pool. Completely portable, finished in beautiful metallic copper. HF speakers can be used in playroom or livingroom, brought outside when desired — or the solid steel swivel bracket may be permanently mounted if required. Bracket accommodates low-cost optional transformer and transformer housing.

HF-15

Low in cost, high in efficiency and realism. The single wide range speaker has its output enhanced by the combination horn/housing.

HF-17

Coaxial combination of woofer and horn-loaded compression-type tweeter. Deep powerful lows, brilliant "concert-quality" high and mid-range tones. Separate reflex tweeter construction renders excellent penetration for speech and general announcing.

HF-20

No better music or speech reproduction can be obtained from any outdoor speaker at any price. Components include horn loaded high compliance cone woofer for rich full-bodied lows — a crossover network — and a separate coaxial combination midrange and tweeter horn and driver unit, for unusual intelligibility, penetration.

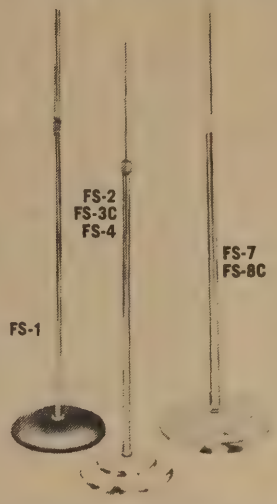
SOUND COLUMNS



These carefully engineered wall-mounted sound columns provide the practical, economical answers to difficult sound reinforcement installations. By precisely restricting sound projection to a 25° vertical pattern (120° horizontal), the sound columns greatly reduce dispersion of sound into undesirable areas. This effectively minimizes reflections which produce feedback "howl," simplifies microphone placement — and prevents "blasting" of audience near the loudspeakers. Excellent for churches, auditoriums, night clubs . . . and all locations where acoustic conditions present difficult problems which cannot be resolved by the use of conventional loudspeakers.

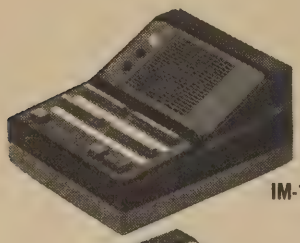
BC SERIES ACCESSORIES

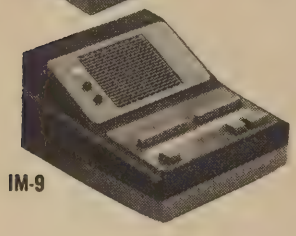
To complement one of the finest lines of microphone stands in the world, **Bogen** offers accessories of superb quality and design that will extend the use and increase the versatility of these stands.

Four principles have guided their design: these accessories must be simple, they must be foolproof, they must be attractive, they must be economically priced.

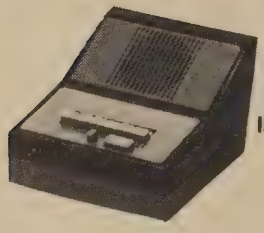
Thousands of hours of design, attention to the most minute and seemingly insignificant detail, insistence on the highest standards of precision manufacturing . . . and the most modern production equipment available have permitted us to offer these accessories, a tribute to success in achieving these goals.



BC-1 Clamp Stand — This sturdy Clamp Stand is actually two items. With the bottom bracket and stud removed and the remaining base fastened to any horizontal or wall surface it is a permanent desk, table, podium or switchboard stand — with the bracket and stud attached it can be temporarily clamped on any shelf, door or table with a thickness of up to 4". The Clamp Stand can be used with goosenecks and other accessories. Tube height 6", 1 lb.



BC-2 Swivel Boom — This precision engineered, carefully balanced, infinitely adjustable Swivel Boom fastens instantly to any floor, desk, table or Clamp Stand. It swivels easily and simply in any direction, tilts to any angle and height and projects the microphone up to 31" from the stand. One wing nut adjusts pressure required for movement or locks boom permanently in any position. 3½ lbs.



BG-6 6" Gooseneck **Bogen** spring goosenecks are strong, silent and beauti-
BG-13 13" Gooseneck fully chromed. Flexible enough to take any form, they
BG-19 19" Gooseneck permit the microphone to be turned in any direction or placed in any position. And even the longest model is strong enough to maintain that direction or position. **Bogen** goosenecks may be used on desks, floors or Clamp Stand . . . or direct with BA-11 or BA-12 flanges on any horizontal or vertical surface.

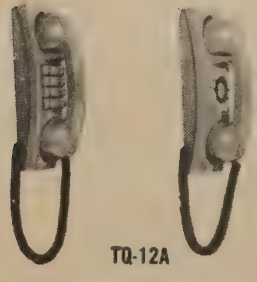
INTERCOMS



IM-17

IM-9

IE-7

IE-13

IE-4S

TSL-16 TQ-12A

Bogen intercoms include a wide variety of systems — each designed to answer a specific need.

■ **SERIES IM INTERCOMS** — One of the most versatile, powerful solid-state intercoms of its type — the Series IM is everything an intercom should be. And then some. At lower cost than a leased system. And without tying up valuable (and expensive) telephone lines and switchboard. You get instant high quality voice communication between office, stockroom, factory, loading dock. With no dialing, no buzzing, no waiting. Up to 17 stations, in any combination of masters and remotes you want. Master stations are completely private. That means you can't be eavesdropped on. But when you're called, you can switch to "hands-free" operation without the need to operate switches. Unlimited flexibility provides up to eight simultaneous private conversations in a seventeen station system. Remotes can be either private — best for inter-office use — or non-private, so the shop foreman, for example, can answer you "hands-free" from anywhere in the area without interrupting his work. Up to six watts of peak output power from the master means he'll hear you — and vice versa — without the addition of an optional amplifier.

IM-9 MASTER STATION for systems up to 9 stations — all masters or one master and remotes or several masters and remotes. **IM-17 MASTER STATION** for up to 17 stations. **RIM-1 REMOTE** has a non-selective call-initiation switch (to one master), volume control, privacy switch. **RIM-3 REMOTE** similar to RIM-1 but with selective call-initiation switch to three masters. **TBS-45 OUTDOOR/INDOOR REMOTE** speaker functions as a remote in high noise level areas. With CS-1 or CS-3 switch, remote can initiate calls to one or three masters. **WX-6 WALL MOUNTING REMOTE** for office, hall or shop. With CS-1 or CS-3 switch, remote can initiate call to either one or three masters.

■ **SERIES IE INTERCOMS** — One of the hardest-working intercoms you'll find anywhere. With it you can choose an All-Master System that gives you single or conference-call communications with up to thirteen stations, anywhere in your company. In a thirteen station system, six simultaneous private conversations can be held. You can substitute one or two remotes in a stockroom or plant, so that personnel can answer "hands-free" without interrupting their work. You can even cut into your P.A. system for direct paging. And with the addition of our optional TBR-1 relay, the man you call can reply "hands-free" directly through the P.A. loudspeaker—as clearly as if he were in the same room.

IE-7 MASTER STATION for systems up to 7 stations — all masters or single master/multiple remote. **IE-13 MASTER STATION** for up to 13 stations. **RIE-1 REMOTE** has a non-selective call initiation switch to master.

■ **IE-4S ANNUNCIATOR INTERCOM SYSTEM** — The most intercom for your dollar, if your requirements are limited to a few stations. Sophisticated, yet simple. Hard working, yet easy to operate. Functional, yet beautiful. The IE-4S may very well be all the intercom you need. One master and one remote station give you instant, direct and clear communication anywhere in the organization. Add a second or third remote, if your needs call for them. Call any or all remotes, just by pushing the appropriate buttons. For convenience, the remotes can be either private, which prevents eavesdropping, or non-private, for "hands-free" reply with no interruption of work. Unlike other intercoms in its class, calls from remote stations to the master are announced by a discreet beep, and a small annunciator shows which station is calling. If the master is unattended when the call comes in, the annunciator remains on, indicating at a glance who called. It's like having an electronic secretary.

INTERNAL PHONE SYSTEMS — Extremely flexible telephone systems that provide simultaneous conversations without a costly central exchange. No switching, no dialing, no switchboard delay.

■ **SERIES TSL** — As many as eight conversations may take place at the same time in a 16-station system. Up to sixteen individuals can converse in a conference call. 100% trunkage is provided — stations can be used simultaneously without interference.

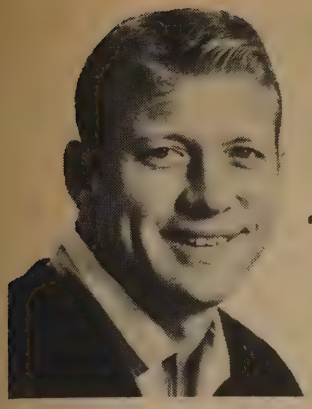
TSL-16 with 1 ring button and 15 station selector buttons. **TSL-8** with 1 ring button and 7 station selector buttons. **TRC** Phone Page Adapter allows paging from TSL phones.

INL-1 TELEPHONE INTERFACE ADAPTER

- Dramatically extends the use of **Bogen** TSL private phones by connecting them with nationwide Bell System.
- Outside calls made from or received at any TSL private phone, substantially reducing the need for Bell phones.
- Compatible with Bell key telephones and a variety of Bell PBX switchboards; Operator uses same headset for all calls.

The **Bogen** Model INL-1 is a telephone adapter for connecting **Bogen** TSL private telephones to the nationwide Bell System, with the aid of an interface provided by Bell. It is ideally suited for stores, offices and plants that have a high volume of internal calls with relatively few calls outside the building. A typical installation using a Bogen TSL-16 System can connect up to 15 private phones to the Bell System.

■ **SERIES TQ** — Up to 13 stations in a low-cost, fast operating system. Features selective ringing with common-talk line for single conversion or conference call. Series TQ **Bogen**-Phones are available in three models.



TQ-1A for 2 station systems. **TQ-6A** phone for up to 7 station system. **TQ-12A** phone for up to 13 station system. **TRA** Phone Page Adapter allows paging from TQ phones.

PRS-16A Power supply for TSL Phones. **PRS-1A** Power supply for TQ Phones.

THE ALL-TRANSISTOR TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" INTERCOMMUNICATION SYSTEMS

"Has Everything . . . Does Everything"

One Model Meets Every Requirement

Setting a high standard in quality, design and performance, the TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets the intercom needs of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

ONLY THE TALK-A-PHONE "CHIEF" AND "CHIEF REDI-POWER" GIVE YOU ALL THESE FEATURES

• **DISTINCTIVELY STYLED**—Less than 3-inches high. In cabinets that combine the look and feel of fine-grained leather with the strength and rigidity of steel. Attractively finished in charcoal gray and brushed chrome.

• **"PRIVATE" OR "NON-PRIVATE" MASTERS AND STAFFS**—Exclusive Dynasonic Design enables stations to perform "privately" (so no one can listen-in), or "non-privately" (for reply without use of controls). A Master can be "private" to one or more Masters and "non-private" to others, where Staffs need not originate calls to that Master. Staffs can originate only to "private" Masters.

• **INCOMING CALL CHIME**—A standard feature of Masters. Indicates that your station is being called. Caller talks, voice follows.

• **MONITORING SIGNAL**—A standard feature of Masters and Staffs. Visually indicates to a "non-private" station that it is being monitored.

• **BUSY SIGNAL**—A standard feature of Masters and Staffs. Visually indicates when station you call is "busy." All units have facility to override "busy signal" for important calls.

• **DYNASONIC SELECTOR**—An exclusive TALK-A-PHONE feature that permits intermixing of stations and variation of performance. Add to system at anytime without discarding original equipment.

• **MULTI-MAGIC STATION SELECTOR**—A patented, exclusive TALK-A-PHONE feature that enables selection of up to 30 stations with only 12 push buttons . . . 40 and 50 stations with 14 push buttons . . . in the same attractive cabinet style and size.

• **UNI-TRANS DICTATION CONTROL**—No need to operate or hold down controls when one-way transmission is desired or when Cradle Phone is used.

• **EXTERNAL RELAY CONTROL**—A standard feature of Masters. Enables Master to activate external relays for operating siren, gong, light, etc. Use in extremely high noise level areas to signal personnel, who can then communicate with caller from Master in quieter location or in sound booth. Operates simultaneously with chime within Master.

• **RECIPROCAL POWER SUPPLY**—Each Master operates on 120 volts, AC only, and should be plugged-in. Where no electrical outlet is available, up to 30% of the "Chief" Masters in the system can operate without being plugged-in.

• **NOISE-FREE VOICE RANGE POWER**—The rugged, all-transistor high-gain amplifier provides unsurpassed clarity and naturalness of tone. The exclusive, patented TALK-A-PHONE circuit enables performance without noise, hum or distortion when used with TALK-A-PHONE cable.

• **HI-POWER STAFF STATIONS AND HORNS**—For use with any TALK-A-PHONE Master where high volume at Staff locations is needed. Ideal for paging speakers. K-HP-3 provides more than twice the volume of universal Staff; K-C-20 provides about 4 times greater volume . . . more with REDI-POWER Masters.

• **WALL SWITCH**—Combine with TALK-A-PHONE Horn or Hi-Power Staff to add origination-of-call feature.

• **"LD" LONG DISTANCE**—(optional accessory on Masters). For use over cable lines of 2,000 ft., 5,000 ft., 10,000 ft. or more without loss of volume. Functions only between Masters with LD . . . not between an LD Master and Staff. Built-in at factory at additional cost.

• **CRADLE PHONE**—(optional accessory on Masters or Staffs). Has live microphone. Provides listening privacy and greater speaking convenience. Diminishes background noises in noisy areas. Eliminates use of controls in conversation between Masters. Cuts off incoming voice from loudspeaker when in use.

• **WALL MOUNTED CRADLE PHONE**—(optional accessory). For noisy areas and listening privacy. Use with K-HP-3, K-C-20 and K-S-101 or K-S-102. Speaker disconnects when in use.

• **RIGHT-OF-WAY RELAY**—(optional accessory). Use with "CHIEF REDI-POWER" Masters to page any group of stations with a single button. Paged stations can also be used for intercommunication. K-RW-10 capacity, 10 stations, K-RW-20 capacity, 20 stations. Connects to one Master, other Masters also utilize facilities.

• **POWER PAGING BOOSTER**—(optional accessory). Use with "CHIEF" Masters to page a group of speakers with a single button. 50 watts output. Requires its own paging speakers (as K-C-20, K-HP-3). Provides paging facility only . . . paged stations cannot reply or originate calls through paging speakers. Connects to one Master, other Masters can also utilize facilities.

To connect the K-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each K-C-41 or K-C-42, follow same procedure). PORTABLE LOUDSPEAKERS

TR SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

TR SERIES

Built with a great reserve of power for most uses – 40 watts peak per channel – the Newcomb TRS-1680 is perhaps the most complete and flexible portable sound system ever built. It reproduces stereo or mono with the turn of a knob. Stereo or mono tape or radio can be fed to the system. Live music and speech are reproduced either stereo- or monophonically.

TRS-1680 SERIES 80 WATT

It has three mike channels. The central mike puts the speaker or square dance caller in the middle, midway between the reproducers. There are separate treble, bass, and volume controls for phono or other reproduced sound. Each mike channel has its own, individual tone and volume controls. Mike tone controls are rotated for treble adjustment, pushed or pulled for bass. There is a blend control to provide any degree of stereo you wish. There are "Left" and "Right" inputs for radio, tape, or auxiliary; a scratch filter; "All" or "Phono" monitor jacks; jacks for two or four speakers with an impedance-matching switch. Turntable-amplifier unit DIMENSIONS: 9¼" x 17⅞" x 18⅝"; 43 lbs. POWER CONSUMPTION: 180 watts, 117 volts, 60 cycles a.c. A wide choice of reproducers to meet specific assignments is offered...

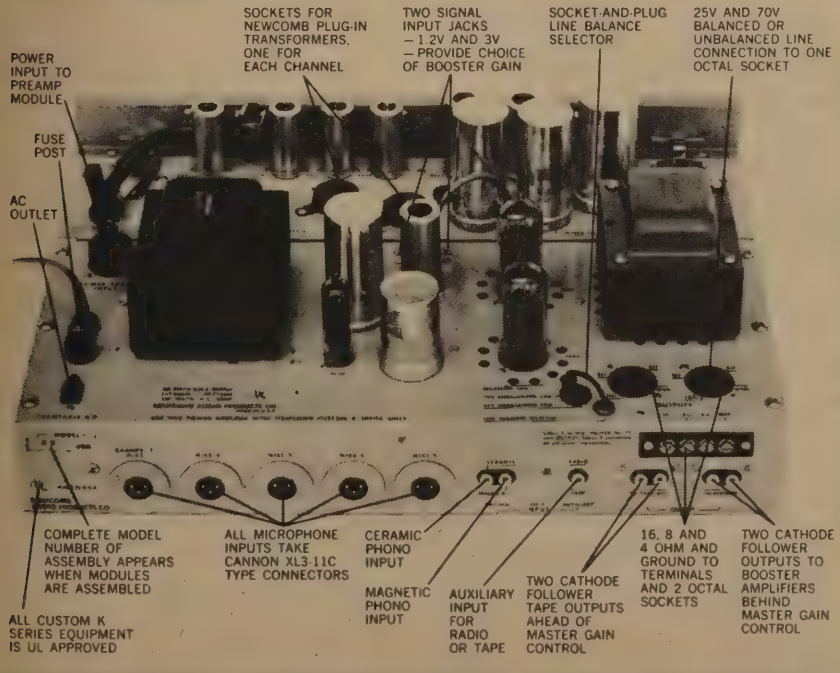
MODULAR PUBLIC ADDRESS AMPLIFIERS

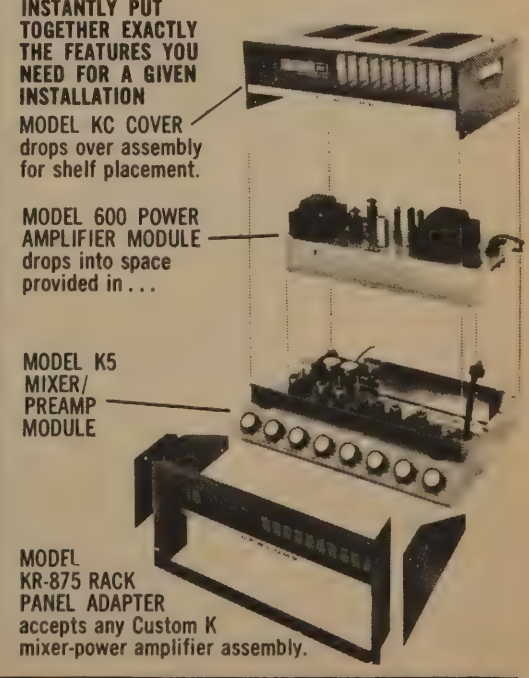
CUSTOM SERIES K

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY



Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address amplifiers weren't made this way to begin with.



All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

70 COMBINATIONS FROM 14 UNITS

The modular concept makes it possible for you to get exactly the features you need without delay. Four chassis and four power units combine to form **15** basic assemblies. The VU meter may be added to **12** assemblies. **8** models (K4R assemblies with and without VU meter) become remote-control units with the addition of the RB4 accessory. All **35** may be rack panel mounted or covered for free-standing use. (UL requires that they be purchased with one or the other.)

AS SIMPLE TO SPECIFY AS THEY ARE TO ASSEMBLE

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than ½%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** 18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, −12 db at 20 cycles. **Treble tone control range:** −18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, −12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required** for 1 volt output from cathode followers: **Mikes,** .0028 volts, gain 54° db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. Equalized to full RIAA curve. **Ceramic pickup,** .086 volts. Equalized to RIAA curve. **Tuner or Tape input** (Aux.), .34 volts, ½ meg., gain 6.4° db. °Gain stated is with 1 meg. output load. With 600 ohm output using TR-100 add 13 db. **Hum** below 10 volts output (inputs shorted): **Mikes,** −80 db. **Magnetic pickup,** 70 db. **Aux. input,** −80 db. **All controls off,** −100 db. Socket supplies power for VU-2T volume indicating meter. Note: K4R provides for remote control of all inputs. **Dimensions,** all models: 17″ x 13⅜″ x 7⅜″ (height dimension includes KC cover). **Weight,** all models: 7 pounds. All microphone inputs require Cannon XL3-11C type connectors.

MODEL P POWER SUPPLY takes the place of the power amplifier in the space provided in the K3, K4R, and K5 preamp modules, and supplies power to them through an octal socket. (It is never needed when a Model 400, 600, or 1250 power amplifier is used.) Model P includes a socket for a plug-in output transformer and output terminals for a balanced or unbalanced 600 ohm line. **Maximum 600 ohm output = 0 VU. SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

Amperex INDUSTRIAL AND HIGH FIDELITY Speakers

STANDARD SPEAKER SERIES

Amperex standard speakers offer a wide diversity in characteristics, size, and price for all kinds of radio and television sets, phonographs, tape recorders, sound columns, etc.

Most standard speakers have a flat magnet system of powerful Ferroxdure ceramic. For television sets and other applications where the leakage field should be kept as small as possible, there are Amperex loudspeakers with a Ticonal magnet in a pot system. Due to the use of Ticonal 750 these pot systems are very small.

NOTE: ALL STANDARD SPEAKERS AVAILABLE IN 4, 8, 15, AND 25 OHM IMPEDANCES.

LR4B: An even further engineering advance allowing the famous E-V curved Line Radiator to be improved in control of dispersion with reduced size and easier mounting ability. In the LR4B, the curved Radiator is actually built in a straight configuration by mounting 5" x 7" cone speakers in a "multi-plane" front surface, each speaker at a different, carefully engineered angle. New ST350A sectoral tweeter provides smooth, extended high-frequency response. Integral electrical filter reduces effective length of the radiator with increasingly higher frequencies providing same control of dispersion at all frequencies. Directional control greatly reduces feedback and unwanted reverberation. Response: 90 to 15,000 Hz. Dispersion: 60° vertical, 120° horizontal. 90 watts program. Impedance: 8 ohms. Sound Pressure Level: 113½ dB†. 48" h., 7½" w., 9¾" d. 40 lbs. Completely weatherproof wood enclosure with utility black finish. $150.00

LR4A: Curved design[a] to overcome unwanted high frequency dispersion at ends, eliminates echo and feedback. Uses nine 3" x 5" and three 3½" cone speakers. Dispersion: 160° horizontal, 60° vertical. Response: 200 to 10,000 Hz. 25 watts program. Impedance: 8 ohms. Sound Pressure Level: 112 dB†. 48" h., 7" w., 13" d. Mesa tan wood enclosure. 26 lbs. $147.90

LR7: Curved Line Radiator. Uses nine 5" x 7" speakers and two T35 vhf drivers for frequency range of 200 to 17,000 Hz. Coverage: horizontal 160°, vertical 60°. 50 watts. Impedance, 8 ohms. LR4SA: Straight Line Radiator. Weatherproofed for outdoor or indoor installation. Extruded aluminum case is finished in Faun metallic. Electrical filters remove end speakers from circuit as frequencies increase, eliminating high frequency lobes. Response: 200 to 10,000 Hz. Impedance: 8 ohms. 40 watts program. Dispersion: 30° vertical, 160° horizontal. Sound Pressure Level: 116 db†. 48-3/8" l., 6-5/8" w., 4-7/8" d. 25 lbs. $115.50

Power Megaphones

New Electro-Voice Power Megaphones are extremely rugged, waterproof, weatherproof, and salt spray proof for the most severe uses: safety services, construction, sports, tour guides, marine, home uses, all emergency applications, etc.

All units include low-distortion, all-transistor amplifiers for high intelligibility and long term, trouble free operation. Two styles are available: pistol-grip trigger with built-in microphone for instant readiness in any situation; and separate microphone with coil-cord for semi-permanent installation or for resting heavier models. Pistol grip models are well balanced for ease of holding. Except for PM4G, all models have volume controls easily reached by thumb. Most models, except 6G and 4G, have noise-cancelling microphone which reduces unwanted background sound and feedback for higher operating volume. All models have convenient carrying strap.

16 and 20 watt models incorporate an alarm tone signal, push-button operated, useful for attracting attention, as a distress signal, or boat fog horn. These models carry a bright International Yellow — recognized emergency color. When nickel-cadmium batteries are used in 16 and 20 watt models, they can be recharged without removing them from the megaphone using the C1215 plug-in recharger listed below, for semi-permanent life.

MICROPHONES AND ACCESSORIES

POLYDIRECTIONAL RIBBON — 77DX

The quality microphone standard of the broadcast industry, the RCA 77DX, is available in two models: one with a low-gloss finish for TV, the other a satin chrome finish for AM and FM. The 77DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency-response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be ultilized. The 30- to 20,000-Hz frequency response of the 77DX makes it suitable for every high-fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30- or 150-ohm output impedance. This 77DX mounts on a standard ½-inch pipe thread, and comes with 30 feet of three-conductor shielded cable, less plug.

77DX Satin Chrome Finish $224.00*

- Re-usable.
- Stronger than conventional chassis — heavy gauge aluminum-reinforced covers.

Instead of conventional bulky, difficult-to-work, pre-assembled welded chassis, the SEEZAK system consists of individual front and side rails, and a flat top panel, with optional matching bottom plates and terminal boards.

By means of the patented locking device rails snap together to form a sturdy chassis frame.

The top panel may be firmly fastened to the rails after fabrication, by self-tapping screws (supplied) through the pre-drilled mounting holes on the rails and panel.

Specially designed Phenolic, Fiberglass and Epoxy Glass boards and terminals for SEEZAK chassis available from stock.

BUD Series 2000 Upright Cabinet Racks

Series 2000 has emerged as the creative industrial designer's (Leon Gordon Miller, F.I.D.S.A.) conception of what image the modern electronic enclosure should convey to enhance the prestige of the contents. It combines the dramatic appearance of sheer, square lines with rugged construction. Together with its unique facade, it offers many exclusive features and economies inherent in all Bud products.

One of the time and cost saving benefits of the Series 2000 Cabinet Racks is the fact that they are shipped completely assembled and immediately available for use upon removal from the protective carton.

The basic frame is all-welded construction employing 14 gauge steel members. 18 gauge steel is used in the door, sides and top. "U" braces welded to the sides of the frame augment its strength and rigidity and act as the mounting for the vertical rails, which may be horizontally adjusted. Front panel mounting rails are tapped 10-32. Rear rails are pierced 9-32. Caster bracket in base is drilled for Bud RC-7758 casters.

All series two thousand enclosures may be quickly combined with each other laterally to create units of any desired width as shown in the Add-A-Rack series. In addition a number of Series 60 accessories are easily installed.

Standard finishes are Royal Blue or Gray textured enamel with clear anodized aluminum cowl and Gold textured enamel with gold anodized aluminum cowl. When ordering please add the following suffix to the catalog number: Gold **(GD)**; Royal Blue **(RB)**; Gray Textured **(GT)**.

White panels **(WH)** are recommended for use with Blue or Gray and Sand panels **(S)** with Gold cabinets. All Cabinets accommodate standard 19" Panels.

Elements comprising each cabinet are specified above the adjoining tables.

The Series below include Welded Framework, Plain Sides, Plain Rear Door and Solid Top.

BUD Series 2000 Inclined Panel Cabinet Racks

While all Series 2000 Cabinet Racks have the same styling and construction features, the Inclined Panel Models, in many instances, have different purposes than the Upright Models. Since the inclined panel is positioned 20 degrees off vertical, viewing the instruments by a seated person is more comfortable.

This model lends itself admirably to console arrangement, in a straight line in Add-A-Rack fashion.

Like the Upright Models, these cabinet racks are also shipped completely assembled, saving time and money.

An exclusive feature of the Series 2000 Inclined Panel Rack is that the panel mounting rails in the front vertical and the inclined panel section, as well as in the rear, are adjustable from front to rear. Caster brackets in the base are drilled to accept Bud RC-7758.

The standard finishes for these products are Royal Blue (RB) or Gray Textured (GT) Textured Enamel, with clear anodized aluminum cowl, and Gold Textured (GD), with gold anodized aluminum cowl. White (WH) panels are recommended for use with Blue or Gray racks, and Sand (S) colored panels with Gold racks.

BUD FLIP TOP CABINETS

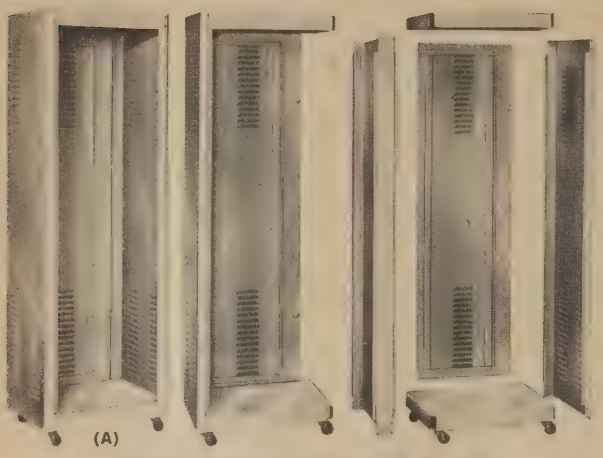
In recent years, many new cabinets have been brought onto the market, but they have merely been changes in dimensions, in trim, in paint finishes, or in rack design. Now, we are proud to introduce the "FLIP TOP CABINET" which is new in concept, new in design, and TRULY NEW IN ITS OPERATING FEATURE.

The key innovative operating feature is a retractable viewing surface that provides additional "read-off" space.

It is available in four sizes. The three smaller sizes have a welded body, made from 18 ga. steel, with a rear panel permanently welded on. There are knockouts in the rear panel to provide cable access, rear switch operations, etc. The largest size, also fabricated of 18 ga. steel, has a removable 16 ga. panel at the rear. This removable panel, likewise, has knockouts in the lower portion.

The Flip Top feature, made of 18 ga. steel, is activated by a slight pressure applied to the front edge of the hood. This permits the Flip Top to be extended to its open position. A normal pressure on the unit, will close it back to its former position, and secure it in place. An adjustable coil spring can modify the required tension pressure to suit the needs of the user.

An advantage of the retractable top is that switches, control knobs and indicator lights can be mounted on its recessed panel, separated from the instruments mounted on the main panel. This eliminates confusion when all the elements are on a single panel. When the top is closed, any components mounted on its panel are protected from accidental interference.



Available in Royal Blue (RB) or Gray (GT) Textured finish. When ordering use these abbreviations as a suffix to the catalog number to designate the color choice. Both Flip-Top and Front panels are white baked enamel .060 aluminum. Four rubber feet attached to bottom to prevent marring of surfaces on which units are placed.

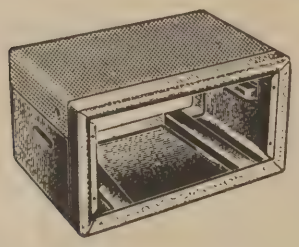
SHADOW CABINETS

An extremely versatile housing since both front and rear panels as well as the bottom may be removed for installation or servicing purposes. Unusually attractive appearance is created by recessing the front panel one inch as well as by beveling the front edges of the body.



The recessed front panel prevents accidental movement of controls, knobs, and switches attached to it.

The two piece body of the shadow cabinet is made of 18 gauge steel and the panels of 16 gauge steel. Finish is light gray hammertone. HG

Four rubber feet attached to the bottom of the cabinet eliminate marring of the surface on which it may be placed.

ECONOBOXES

For applications requiring a sturdier structure than a sheet metal utility cabinet, Bud now offers this line of die-cast aluminum boxes. The close fitting flanged lids are fastened to bosses in the body by means of screws. This feature together with the thickness of the aluminum alloy combine to provide excellent screening properties. The boxes, cast of LM-380 aluminum, are light in weight and easy to machine. These enclosures are suitable for a number of uses including instrument and meter cases, filter networks, junction boxes, switching, audio and radio frequency distributors plus many other purposes where a small box is called for. Especially desired for concealed or other interior use where safety closure is required.

SPECIAL FABRICATION SERVICE

Despite Bud's voluminous selection of types and sizes of enclosures, occasions arise when the designer, for various practical or aesthetic reasons, devises an instrument or systems that requires a cabinet or box that is more individualistic than those represented in this catalog. It is at this point that Bud designers and engineers enter the picture to fulfill the peculiar requirements. With our extensive and varied manufacturing and designing facilities, we are able to build housings that exactly fit the requirements of the developer of electronic devices and instrumentation.

The most economical and less time consuming method is to attempt to modify a standard catalog product to fit a specific need.

When normal runs of original designs are required, we can quote based upon your specifications and designs or ours. We start from an idea and create the finished product. This has been our normal procedure for more than thirty-eight years.

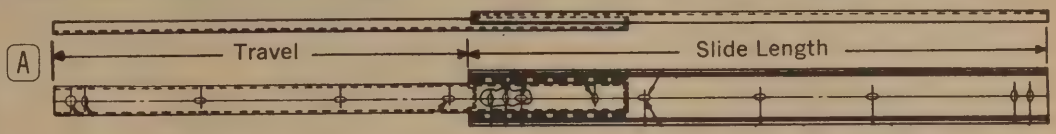
BUD Slides

All BUD slides and Linear Motion Mechanisms are built from four basic components: the outer member, inner member, ball retainer and a number of ball bearings. These parts which are all steel, have been designed to enable us to fabricate an extensive variety of models. All models excel in their precision smooth, featherlight telescoping movement and are unsurpassed for their reliability and absence of wear after many hundreds of thousands of cycles.
Each main member is press formed to a constant and precise tolerance from high tensile cold rolled steel. Ball bearings of chrome carbon steel are set in special retainers which keep them evenly spaced to give an extremely smooth movement of the slide.

MATERIALS — Main members: high tensile cold rolled carbon steel. Ball retainers: cold rolled steel. Ball bearings: precision carbon steel. Mounting brackets, mounting plates, locks pivot wheels, etc.: mild steel.

FINISHES — Main members: Zinc and chromate. Ball retainers: Zinc. Ball bearings: Chromium plate. Mounting brackets: Cadmium plated. Mounting plates, locks, pivot wheels, etc.: Zinc.

LUBRICANT — Special life-long lubricant specification DTD 825B (MIL. G. 23827) unless otherwise specified.



MOUNTING HOLES — All slide mounting holes are .180"x.210".

ASSEMBLY CARE — During assembly operations special care should be taken to prevent drill chippings and other foreign matter from entering the slide ball races. It is important that the slides are mounted parallel to each other and to chassis/drawer to achieve proper movement and fingertip ease of operation.

ADDITIONAL NOTES — Self-cleaning bridged ball retainer. Use only #8 pan or binding head screws for mounting. Long life, full ball bearing movement.

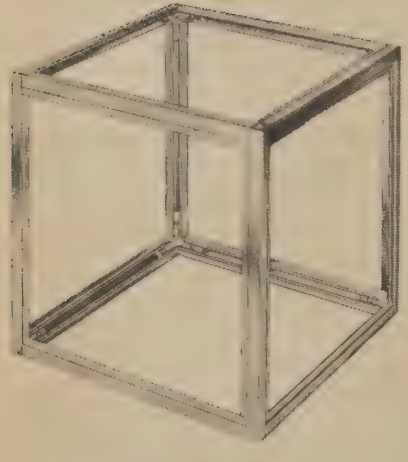
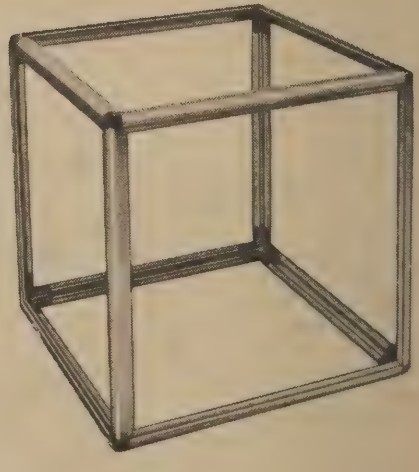
BUD Imlok System





THE BASIC ELEMENTS OF THE BUD *IMLOK* SYSTEM

901 BUD IMLOK SYSTEM

The BUD IMLOK SYSTEM comprises a large variety of aluminum corner connectors which interlock with extrusions to make metal housings easily, quickly and economically. It is ideal for research, prototype and short run work. With the simplest of hand tools, precision cases, boxes, cabinets and consoles may be made. Simple or complex designs are achieved by the proper combination of the elements of the system. Examples are illustrated on the following page. Enclosures are completed by attaching steel or aluminum sheet to the framework by any convenient fastening method.

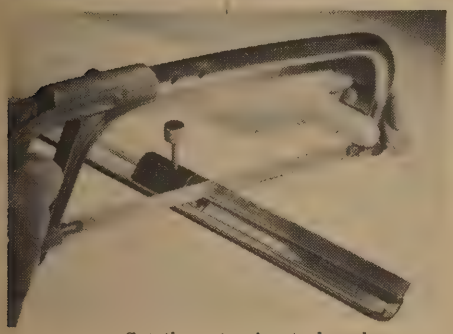
There are two different types of Imlok components and structures. The 901 Slimline components are more slender in appearance, and the corner connectors are completely covered by the extrusions in every completed structure. The Standard components are more rugged, and the ball surface of the connector is exposed. Ease of fabrication and assembly is common to both types.

Every Bud Imlok part is designed with an eye not only to its efficiency as an engineering component, but also to its appearance as a part of a completed housing. Special accessories such as hinges, catches, rubber feet and casters are available. Also a complete range of precision-made handles. Imlok components are available from authorized Bud Distributors in every major marketing area.

STANDARD BUD IMLOK SYSTEM

You may purchase BUD IMLOK in whichever stage of manufacture you prefer:

1. With connectors pre-drilled, ready for assembly with self-tapping screws and with extrusions.
2. With connectors pre-drilled, ready for assembly and with extrusions custom-cut by Bud to your lengths and mitered.
3. As a complete framework, ready for installation of your own panels.
4. As a complete housing with panels, but unpainted.
5. As a complete housing, fully finished.



If you have any queries relating to construction or design, please do not hesitate to contact our Imlok Advisory Service. Our extensive knowledge and experience is at your disposal — alternatively, we will always be pleased to arrange for one of our technical representatives to call on you to discuss any problems you may have.

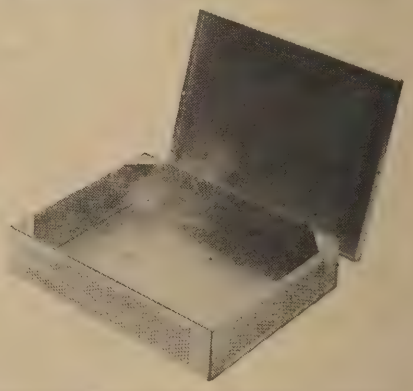
L M B® PRESENTS SOMETHING NEW IN CHASSIS —



THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

NOMINAL OVERALL DIMENSIONS
Height: 10½" Sloped Panel unit; 47⅝"
17½" Sloped Panel unit; 50⅝"
Width: Panel Width +3"
Depth: Panel to Panel Depth +2⅞"

GENERAL FEATURES: The Trimline Series presents trim, classic styling with a sturdy, welded steel structure. Modular construction provides for multi-rack configurations and console designs using standard units. Modifications and accessories are available to complete the majority of engineering requirements for electronic enclosure systems.

NEW DESIGN AND ENGINEERING FEATURES: 1) **Welded frame construction** with formed 1 piece tops and bases provide extra rigidity and squareness. The new 1 piece base design can serve as a heavy equipment mounting shelf, with built-in KO's and cutouts for cables, leads and concealed caster mounting or leveling legs. 2) **Anodized aluminum trim** with textured vinyl inlays add color, styling and individuality to system enclosures. 3) **Outside removable, flush side panels** give quick access to enclosed equipment for inspection and service. Flush mounting minimizes overall width and can be used for shielding between bays. 4) **Fully gasketed doors** can be mounted for LH or RH operation, have concealed hinges, are instantly removable without tools and are held closed firmly with full length magnetic stripping. Doors are furnished with handle, lock and two keys. 5) **Recessed front and rear panel areas** will accommodate flat or formed panels and permit the use of doors over installed panels. 6) **Two pairs of fully adjustable panel mounting angles** are tapped on all legs with 10-32 holes on EIA and WE universal spacing to save equipment mounting time and effort.

TRIM NUMBERS: Added as suffix to assembly number; includes vertical and horizontal members with vinyl inlay, complete and installed on frame.

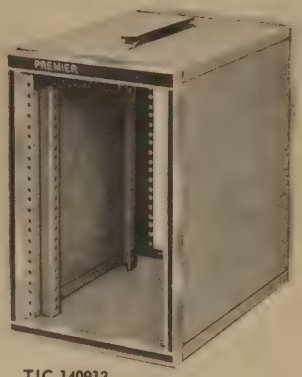
PREMIER TRIMLINE INSTRUMENT CASES



Distinctive Electronic Packaging

TIC 101921

TIC 081517

TIC 140913

General Description: High in quality and distinction, moderate in cost — Trimline Instrument Cases, with their extraordinary strength, beauty and utility, are designed to meet the engineering and marketing design requirements for OEM electronic products packaging for free standing or rack mounted instrumentation or systems.

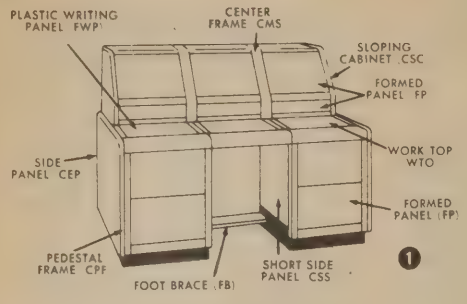
The cases are trimmed front and rear with anodized, extruded aluminum and decorative vinyl inlays. Carrying hand grips are also decorated with matching inlays. Finishes are available in a wide choice of standard Premier colors in either fine grained textured vinyls or semi-gloss enamels. Through the wide choice of variations in size, finish and decorative trims, the Trimline Case becomes distinctive and individual for your product marketing identity.

Quick delivery with customized finishing and assembly is achieved by our extensive inventory of pre-fabricated component parts.

Lightweight strength and rigidity is achieved through the use of multiple offset and angle forming of 20 ga. C/R steel interlocked and welded to the 4-16 ga. channel corner post sections used for reinforcement and equipment mounting accommodations. Panel and interior equipment mounting channels are provided with holes on EIA and WE standard spacing to accept #10 Tinnerman Speed Nuts and screws. Provisions for equipment mounting permit the ready use of the following accessories: tiltstand; panels, front and rear; slides; rack adapters; chassis and shelf support angles; interior mounting matrix panels for components and/or brackets; and access doors with or without locks. Ventilation provisions and other modifications are readily available at nominal cost.

The large variety of sizes, the adaptability for equipment mounting requirements, the variety of trim, finish and product identification options, the ready availability at modest costs, make the Trimline Series of cases an ideal choice for electronic product packaging.

Special Size:



Free standing unit convertible to rack mounted installation. A special design size (15⅝" Panel Width) has been incorporated into the Trimline Instrument Case line which makes the entire case easily adaptable into standard 19" rack systems. The overall case width accommodates rack adapters to fit cleanly into 19" rack widths. The overall case height conforms to standard panel heights, requiring no fillers to adjacent panels above or below the Trimline Case. This design size is especially desirable for bench or desk instrumentation that might need transfer into a rack mounted system without requiring a different sized enclosure for each usage.

METALLIZED MYLAR*
CHARACTERISTICS

Metallized MYLAR* satisfies the requirements of high resistance, low absorption, excellent retrace and capacitance stability over a wide temperature range and high ambient operating conditions. The self-healing characteristics are well known and extend the useful life of the capacitor. The second, and most overlooked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in extreme small size without sacrificing life, reliability and economy. Temperature range is minus 90°C to 125°C without voltage deviation. All units are extended foil construction.

TYPE AB
BATHTUB STYLE

Type AB CAPACITORS are hermetically sealed in bathtub containers and designed to operate under the most severe military environment and electrical conditions.

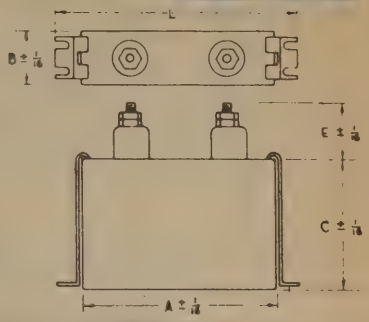
HIGH VOLTAGE FILTER CAPACITORS



SMALLEST SIZE AVAILABLE ANYWHERE

All glass containers with 'D' dimensions of 19/32 have 2-1/2 inch long 18 tinned copper pigtail leads.

CONTAINER is a hard glass pillar with silver fused to each end. A metal ferrule is soldered to each end assuring hermetic sealing. The stud is silver soldered to the ferrule. All parts are tin plated.

TYPE OF and **TYPE LK** capacitors are hermetically sealed, rated for operation at 85°C at full nameplate rating, and will withstand most environmental and electrical specifications in general use. Size is very small due to the nature of the dielectric used, and the particular attention to processing.

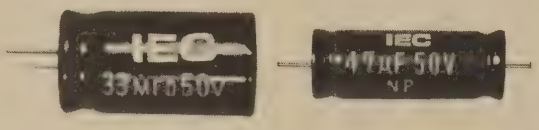
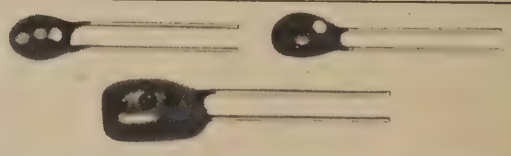
IEC CAPACITORS



INTERNATIONAL ELECTRONICS CORPORATION

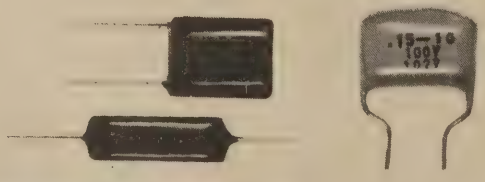
ELECTROLYTIC CAPACITORS



Miniature Aluminum Electrolytic—Axial and radial lead styles with welded construction, in PVC insulated aluminum cans. Unique spinning and crimping method assures a tight fitting end seal that provides proper venting while effectively resisting humidity and cleaning agents.

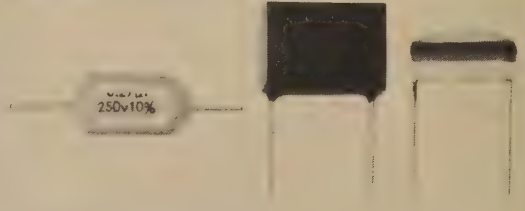
Capacitance Range	.47 MFD—2000 MFD
Operating Voltage	6.3 Volts D.C.—450 Volts D.C.
Temperature	—40°C to +85°C

Non-Polarized Electrolytic—Designed for use in circuits seeing polarity reversals, such as speaker crossover networks, and bypass applications. A unique method of sealing permits the capacitor leads to be connected directly to the electrolytic element.



Capacitor Range	1.0 MFD—100 MFD
Operating Voltage	25, 35, 50 Volts D.C.
Temperature	—30°C to +85°C

Dipped Solid Tantalum—Epoxy-dipped miniature capacitors with radial leads for printed circuit applications.



Capacitance Range	.1 MFD—100 MFD
Operating Voltage	3 Volts D.C.—35 Volts D.C.
Temperature	—55°C to +85°C

POLYESTER FILM CAPACITORS

Subminiature Polyester Film—Subminiature package with radial leads for easy insertion in printed circuit boards. Axial and radial lead versions are triple epoxy dipped to assure a high insulation resistance and humidity protection.

Capacitance Range	.001 MFD—.5 MFD
Operating Voltage	100, 200, 400, 600 Volts D.C.
Temperature	—40°C to +85°C, with no derating

Metalized Polyester Film—Non-inductively wound, extended foil construction. Self-healing characteristics assure extended life in all applications.

Capacitance Range	.0047 MFD—10 MFD
Operating Voltage	63 Volts D.C.—600 Volts D.C.
Temperature	—40°C to +125°C

Over 4,000 types and sizes available from stock.

Our manufacturing and distribution control system guarantees that we never run short. So IEC or our distributors can deliver the capacitors you want, when you want them.

And we know that quality is as crucial as delivery. That's why our capacitors are built for accuracy and have to pass the industry's most demanding life tests before shipment. These are some of the reasons leading manufacturers of entertainment and industrial equipment everywhere depend on IEC.

If you use electrolytic or film capacitors, trust IEC to deliver quality at a competitive price. For complete details, write or call International Electronics Corporation.

SPRAGUE CAPACITORS

TYPE 150D TANTALEX® SOLID-TANTALUM CAPACITORS

- Hermetically Sealed Metal Case.
- Solid Electrolyte Cannot Leak or Corrode, Even if Hermetic Seal is Accidentally Broken.
- Exhibit Stable Capacitance and Low Dissipation Factor over Temperature Range of −80°C to +85°C. With Appropriate Voltage Derating, May Be Operated to +125°C.
- Listed Units have Capacitance Tolerance of ±10%. Capacitors with asterisk (*) are also available with capacitance tolerance of ±20%. For ±20% tolerance, change 9th character in catalog number from 9 to 0.
- Capacitors with star (★) have extended capacitance ratings (higher capacitance, smaller cases) required in some new equipment designs.
- Listed Units have Plastic Sleeves. For Bare Case, end Cat. No. in "0" instead of "2."
- For complete technical data, refer to latest issue of Engineering Bulletin 3520.

SPRAGUE CAPACITORS

TYPE 162D RED TOP® SOLID-TANTALUM CAPACITORS

- Miniature commercial/industrial capacitors, intended for use in compactly designed equipment.
- Metal cases with resin end seals.
- Priced competitively with molded-case capacitors.
- Operating temperature range, −55 C to +85 C.
- Listed units have capacitance tolerance of ±10%. Capacitors with asterisk (*) also available with tolerance of ±20%. When ordering ±20% capacitors, change 9th character of cat. no. from 9 to 0.
- Listed capacitors have heat-shrunk polyester film insulating sleeve. For bare metal case, change last character of cat. no. from 2 to 0, and subtract .005" from diam. and .010" from length.
- For complete technical data, refer to latest issue of Sprague Engineering Bulletin 3536.

SPRAGUE CAPACITORS

TYPE 39D POWERLYTIC® ELECTROLYTIC CAPACITORS

Designed for applications which require the greatest possible capacitance in small physical case sizes.

- Type 39D capacitors supplement the original Type 36D Can-type Powerlytic line by offering high-capacitance units in axial-lead tubular configuration.
- Welds at all critical anode and cathode terminals eliminate riveted or pressure connections to assure freedom from open circuit even during operation in the microvolt or millivolt signal range.
- Improved molded phenolic end seals.
- Furnished with outer plastic insulating sleeve.
- Operating temperature range, −20 C to +85 C.
- These capacitors are provided with a pressure-sensitive safety vent.
- Low ESR, low leakage currents.
- For complete technical data, see latest issue of Sprague Engineering Bulletin 3415.

SPRAGUE CAPACITORS

TYPE 36D POWERLYTIC® ALUMINUM ELECTROLYTICS

- Maximum space economy at operating temperatures to 85 C.
- Low ESR, low leakage currents.
- Extremely long shelf life.
- Uses most reliable seal developed by Sprague for aluminum electrolytic capacitors.
- Pressure-type safety vents employing silicone rubber are used on all cases.
- Capacitors with star (★) have extended capacitance ratings (higher capacitance, smaller cases) required in some new equipment designs.
- For technical data, refer to Sprague Engineering Bulletins 3431 and 3431.3.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors had not been recommended for low-voltage applications. Improvements in design now permit their use at all voltages from 1 to rated, in nearly all applications. The principal difference between the two construction types is that, at resonance, losses are likely to be lower in the extended foil type, because the resistive component of impedance is likely to be higher at resonance in the inserted tab type. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab is recommended because this type of construction permits substantially smaller physical size.

CLEANING SOLVENT "CAEON SOLVENT #27"

(FREON® TF)
(Trichlorotrifluorethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

• NON-FLAMMABLE • VIRTUALLY NON-TOXIC • CHEMICALLY AND PHYSICALLY PURE • CHEMICALLY AND THERMALLY INERT • STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeon #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluable in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface 'Residue-Free'. All standard methods of using a solvent may be employed.

Used by Electronic Systems Servicemen Before and After Repair Operations.

INSTANT CIRCUIT BOARDS™ • FOR INDUSTRY

ADHESIVE BACKED COPPER PATTERNS

A PROVEN TECHNIQUE TO PRODUCE HIGH RELIABILITY CIRCUIT BOARDS *DIRECTLY* FROM SKETCHES OR LOGIC DIAGRAMS.

This aerospace proven concept in circuit packaging permits rapid assembly of all prototypes and limited quantity production systems directly from engineering schematics and logic flow diagrams.
All sub-element conductors are preplated and ready for soldering. Etched copper sub-elements are supplied on thin substrates which have a high strength pressure sensitive adhesive backing. They are designed to withstand soldering temperatures, and offer exceptionally good adhesion strength, yet can be removed when changes require a Circuit-Stik "instant" modification.

THE "1000" SERIES (MFR'S. TYPE) CIRCUIT-STIK SUB-ELEMENTS ARE PRE-DRILLED ON .100-INCH GRID TO MATCH PRE-PUNCHED BOARD MATERIAL — REQUIRES NO DRILLING AND NO TERMINALS

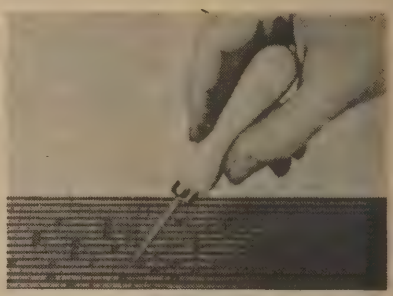
VEROBOARD* BK-6 KITS ETC.



STEP NO. 1

First stage is to lay out the circuit plan on a Vero Design Sheet — printed to represent the plain and copper sides of the appropriate Veroboard — allowing proper spacing for components and indicating where the copper strips are to be broken.

STEP NO. 2

Layout components on the back (plain) side of the Veroboard across the copper strips inserting leads into appropriate holes. You now have connected your components as required using the copper strips as your interconnectors. Leads may be soldered directly to the strips using a light, printed circuit type iron. Careful soldering will enable you to remove components and replace them if required.

STEP NO. 3

Break the circuit where required by breaking the copper strips with the Vero spotface cutter provided in your kit. The cutter is a precision, hardened steel tool which has a pilot pin that fits into any hole, and two cutting edges. Simply turn the cutter several times and the copper strip in the area of the chosen hole will be removed. Your circuit is now complete.

VERORACK 3 CARD FRAME KIT

To provide maximum versatility during the development of electronic equipment and thus reduce costs, System 3A Kits are provided with slotted end plates so that a range of card widths can be accommodated within each standard height. Variation in card depth is achieved by the use of three guide moulding lengths. Standard card spacing is 0.5". A unique universal connector rail extrusion allows mounting of connectors at any point along the 17.0" length and with the use of the connector locating strip connectors are automatically positioned on 0.5" centers. Hardware for 32 connectors, two identification strips numbered 1-32 and 32-1 and two plain strips are included. A 17" hinged front panel can also be supplied.

PIGGY-BACK PATCHORD

Vector Fixed Panel style Patchboards provide simple but reliable low-cost units for multiple connection, single conductor patching for test panels, automation and telemetry equipment, low cost computers, numerical control equipment, paging and speaker systems or other equipment where economy and connection multiplicity are desired.

Extremely low contact resistance (less than .001 ohms) and long contact life (over 2000 insertions per contact without resistance change) assures reliability.

All boards except -4 are marked front and back with horizontal rows lettered alphabetically and vertical columns numbered -4 types have blank front panels. Brackets for mounting are supplied.

Holes for plugs are .093" diameter, spaced on .265" centers. Front panels are removable and may be changed if necessary. Larger contact systems can be made by mounting standard panels adjacent. Special sizes, special marking and screening in colors are made to order at minimum cost.

Inductors

The Wee-Chip Inductor

Designed for Micro Circuit and Hybrid Applications

(ACTUAL SIZE)

The Wee-Chip Inductor is a magnetically shielded miniaturized inductor made especially for mounting on substrates. The inductor body is of high stability, low loss ferrite, combined with a coil cavity of optimum cross sectional area, and mean radius produces a unit having excellent "Q" factor. Copper terminations are of the wrap-around type for the highest degree of mounting flexibility.

The Wee-Bit
(Nytronics Delay Line Sections)

Unique sectional construction available utilizing individual pre-designed Wee-Bit Pulse Delay elements. 48 hour delivery not 8 weeks. No tooling expenses.

The **WEE-BIT** offers the advantage of assembling a unique sectionalized delay line that reduces delivery on prototype delay lines from weeks to days and eliminates expensive tooling and design efforts. Consisting of pre-designed LC sections called Wee-Bits, a discrete value of delay time is offered. The aggregate number of Wee-Bits determines the total delay time and is a function of delay to rise time ratio. An assembly is made of selected Wee-Bits mounted on printed circuit boards that conform to MIL-P-13949B, stacked or single layer and permits increment of delay to be tapped without disturbing uniform pulse shape. Wee-Bit size 0.401" long by 0.625" wide by 0.230" height and are epoxy molded to meet environmental conditions of MIL-C-15305C. Temperature range —55°C to 125°C. 300 VDC working voltage. Delay time available per Wee-Bit from 10 nanoseconds to 100 nanoseconds in 10 nanoseconds increments. Wee-Bits also stocked with 200 nanoseconds delay. This unique wee line sectionalized delay line concept allows reduction of approximately 40% in number of sections ordinarily required*, flexibility of design, and line tapping.

1. Divide desired time delay by desired rise time to obtain Td/Tr ratio.
2. From chart determine corresponding number of sections required.
3. Determine the delay per section required by dividing total delay desired by no. of sections determined in step 2.
4. Select the standard section having the delay determined in step 3. For intermediate values select next lower standard element.
5. Total delay is sum of individual section delays. Trimming of total delay is accomplished by selecting appropriate value of last cell.

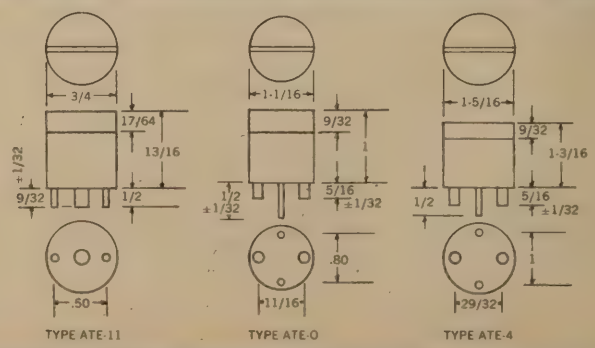
*INCREMENT CURRENT — The D.C. current required to cause a 5% reduction in the nominal inductance value.



This radically new development in the toroidal coil field offers a miniature variable toroid in one of three case sizes as shown above. The **ADJUSTOROID** was developed especially for printed circuit and similar lightweight applications. This unit is hermetically sealed, and there is no physical contact between the adjusting screw and the toroidal winding.

TYPICAL Q CURVE

PHYSICAL CHARACTERISTICS

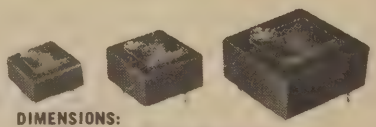
UTC's new MS series of high Q coils are only .23" high x .35" diameter. The low profile makes them ideal for high-density packaging requirements. All coils are molded in black epoxy.

Base diameter (.35") and lead spacing (.2") fall within TO-5 envelope dimensions.

Leads are .025" diameter gold-plated dumet, type D per MIL-STD-1276A, and are both weldable and solderable.

Q CHARACTERISTICS

Excellent Q in the 10 kHz to 50 kHz range, matching and often excelling the performance of much larger units. Designed for application over the wider range of 1 kHz to 100 kHz. See Q Response Curve.



MIL SPECS

All units have been designed, manufactured and successfully tested to complete MIL-27C environmental requirements. MIL Type TF5RX20ZZ.

TOLERANCE AND TEMPERATURE STABILITY

MS units have an inductance tolerance of ±2% at 0.1V RMS, 1 kHz, 0 DC, 25°C. All have excellent inductance stability with temperature: less than ±2% from −55°C to +105°C.

NEW "FE,* FI,* FO"* MINIATURE INDUCTORS

Designed, Manufactured and Successfully Tested to Complete MIL-T-27C Specifications

DIMENSIONS:
FE: 15/16" sq. x 1/2" h., wt. 0.7 oz.
FI: 1 3/16" sq. x 5/8" h., wt. 1.5 oz.
FO: 1 27/32" sq. x 27/32" h., wt. 5 oz.

FE, FI, FO miniature inductors are ideal for transistor and printed circuit applications, having both pin terminals and a molded flat construction. These units are symmetrical toroids providing maximum Q in minimum size. The FE and FI inductors are adjusted at 1 V, 1 kHz. The FO units are adjusted at 1 V, 400 Hz. All units are adjusted to a tolerance of ±1%. The ma DC Max shown is for approximately 5% drop in inductance. The temperature stability is unequalled from −55°C to +100°C. For AC level limitations, a general rule of thumb would be to consider the maximum AC current approximately equal to the maximum DC current rating. However, for specific applications, contact UTC with exact level, frequency, and Q requirements to determine suitability of part in application. All FE, FI, FO inductors are equally well suited for vacuum tube application. All units Mil Type: TF5RX20ZZ.

*One section is wound as a second layer over the other.
Non-magnetic brackets furnished with each choke.

Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. They are used as filters in conjunction with two grounding capacitors of 0.1 microfarad capacity each. The Z-20 Choke is also used at radio receivers to keep out interference. All chokes consist of two, single-layer windings on a single ceramic core, insulated and protected by moisture-proof coating.

radio frequency plate chokes

This series of seven, single-layer-wound, solenoid type radio frequency plate chokes, covers the entire frequency range of 3 to 520 megacycles. The stock number corresponds to the approximate frequency at which maximum efficiency will be obtained, but the chokes may be used at any other frequencies within their operating ranges, as listed in the price table.

Chokes of the four highest frequencies are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects and also prevents breakdown from high r.f. potentials. Non-magnetic mounting brackets are furnished with the largest size, Z-7. The Z-14 and Z-28 have wire leads welded to lug type terminals; the Z-50, Z-144, Z-235 and Z-460 have axial-type wire leads.

Any one of these chokes may be selected for a particular frequency within its recommended operating range with the assurance that it will give excellent performance. Selection should be made, however, subject to the following qualification. It is generally advisable to select a choke with a resonant frequency (see chart) slightly higher than the desired operating frequency since any additional capacity to ground will tend to shift the resonant frequency closer to the operating frequency. Also, for this reason, the frequency designated by the catalog number of a choke is lower than its natural resonant frequency.

parasitic suppressor

The P-300 Suppressor is designed to prevent unwanted ultra-high-frequency parasitic oscillations which occur in the plate and grid leads of push-pull and parallel tube circuits. The P-300 is a non-inductive, 50 ohm, vitreous enameled resistor combined with a choke (in parallel) of .3 microhenries inductance and .003 ohms D.C. resistance. The two form a small integral unit only 1¾" long overall and 21/32" diameter. The unit may be mounted directly in the grid lead without extra support.

Model P-300 Wt. .04 lb.

diode metersaver protects meters

Designed to protect sensitive (high internal resistance) meters against burnout due to overload even where potential is reversed. Introduces negligible error. Consists of 2 silicon diodes in compact case with leads and lugs. Connects across meter terminals without regard for polarity. Shunts excess current around meters — for example, can convert 200 times overload to 3 times overload. Allows use of less expensive meter fuses. Can be used with meters of low internal resistance but use of series resistor is then recommended.

RATIO DRIVES

for FINE INSTRUMENT AND MACHINE CONTROLS

Ball Bearing Type **Compact, durable, exceptionally smooth action**

These unique ratio drives employ precision ball bearings. Used for rotary control of components in instruments, they provide unexcelled smooth motion. Ruggedly built, permanently sealed and lubricated, JAN Ratio Drives accommodate applications where miniaturization is essential.

Input and output shafts of these units operate in the SAME DIRECTION. Type "RDL" provides "in-line" input-output shafts. Type "RDLC" is supplied with **concentric** shafts whereby the output envelopes the input shaft. An added feature of type RDLCC is the output shaft in the rear.

RIGHT ANGLE RATIO DRIVES

Versatile, miniaturized, right angle rotary controls.

Featuring dual output stainless steel shafts at right angles to input, these engineered drives provide an ideal type of instrument control. Available with matched bevel or worm gears covering a wide range of ratios.

JAN'S RIGHT ANGLE DRIVES are especially useful for handling spring or gravity-loaded components since the output shaft automatically locks in any desired position yet remains free for smooth adjustment by the input shaft. Assembled in dust-proof housings, the gears are permanently pinned in place on stainless-steel shafts mounted in oilite bearings and held under constant pressure.

JOLTA SHOCK TEST MACHINES For reproducible impact-shock test pulses

Four models engineered to reproduce the entire spectrum of all significant impact shock waves.

Designed for laboratory and production testing of light to medium weight components as well as complete instrumentation. Produced to meet practically all requirements of common Mil. Spec. qualification tests. Each JOLTA is electronically calibrated to certify compliance with test specifications.

JOLTA – Bench Model No. 1001 – Produced to meet JAN-S-44 & Mil-Std. 202 (202A). Standard model range 30-120G. Accessory plate springs available for test pulses to 500 G.

JOLTA – Bench Model No. M-500 – Produced to meet Mil-T-12679A (Sig. C) and Mil. T-19500A. Standard model range –200 to 1000 G at 1.0 millisecs. Alternate anvil and pad kits available to order.

JOLTA—Floor Model Nos. F-3003-C1, C2, C-3—Designed for high impact shock testing for small and moderate-sized components. Precision-machined magnesium casting utilized for higher shock amolitudes. Typical tests with these units 50 to 5000 G at .2 to 11.0 millisecs. For high impact testing, accessory springs and twin anvil combinations yield impulses of 0.2 millisecs to 5000 G.

Note: New design allows for quick changeovers of accessories.

JAN'S MAGNETIC SHIELDS are made of MU-Metal or equal and are hydrogen annealed by a special process to assure optimum orientation of the molecular structure of the alloy for best magnetic shielding. JAN'S MAGNETIC SHIELDS prevent distortion and intensity modulation of the electron beam due to stray magnetic fields.

In addition, the use of these shields protect personnel against the dangers of accidental tube breakage. Mounting holes are tapped for No. 6-32 screws as shown. These shields are designed to fit JAN'S standard bezels as listed below. See preceding pages for specifications on JAN'S BEZEL ASSEMBLIES.

SAFETY KNOBS

"PRESS-TO-TURN" KNOBS
For Low Torque Applications

Knobs spin freely . . . and **MUST BE PRESSED-IN** while making changes. Developed specifically to prevent inadvertent changing of settings.

For basic dimensions, see our "De-luxe Instrument Knobs" (9, 12, 17 and 22 body diameter series).

When ordering, be sure to substitute prefix "T" for 9 Series and "Q" for 17 Series, as per typical part nos.

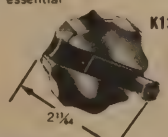
SLIP-CLUTCH KNOB With Spinners

Cat. Nos. K-1375 & K-1376 (For ¼" Shafts)

For driving devices such as variable capacitors, inductors, potentiometers, etc., the "slip-clutch"* automatically disengages and slips when the pre-determined torque has been exceeded. Knobs are fluted, and are equipped with either fixed or retractable spinner for fast turning. Backlash-free units safeguard delicate and costly instruments against careless or inadvertent cranking beyond their normal stops.



Model No. K-1376 is identical with No. K-1375 but has the additional feature of a retractable spinner. Spring loading provides positive, toggle-type action to lock spinner in either open or closed position. Model No. K-1376 is designed for use where economy of space is essential

Normally set for 3-6" lbs. Can be modified for other requirements.

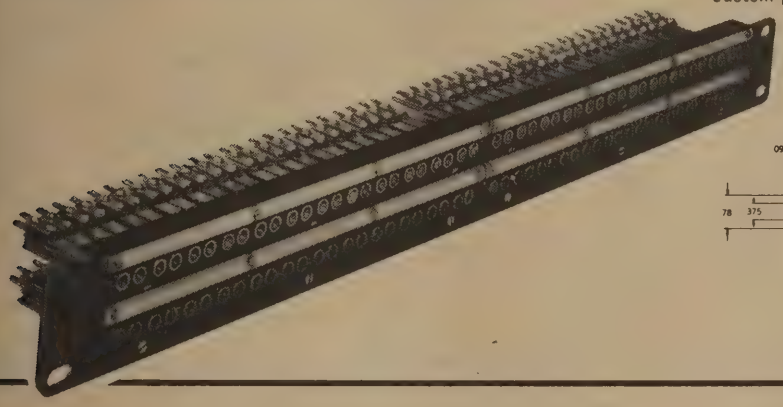
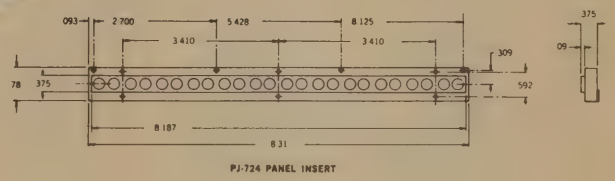
(ADC) Bantam jack panels

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks on a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.



specifications



1. **Panel:** Aluminum alloy, extruded. Finished black anodized per Mil-A-8625A. Overall dimensions 1¾"x19"—Standard EIA mounting centers.
2. **Jack Mounting:** Four moulded plastic inserts, each provides for 24 jacks. Pairs of jacks on 5/16 inch centers. Double-row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.
3. **Designation Strip:** Extruded clear plastic.
4. Panel assemblies are available with a wide variety of two and three-conductor jacks. See listing of Bantam jacks for complete details.

BNC RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

31-320

31-002

BNC - Bayonet Coupled
Popular and Lightweight

Your choice of six different styles: Regular, Improved with Captivated Contacts and Improved in addition to the three "Crimp" versions described below.

MIL-Crimp BNC's are recommended as the optimum BNC, giving optimum operating performance at low installed cost. Using standard crimping tools, these units can be assembled in a fraction of the time usually required for braid-clamp type connectors by eliminating critical assembly and soldering operations and reducing the parts to handle. Captivated center contacts prevent circuit discontinuity under environmental or mechanical stress. MIL-Crimps are weatherproof; their constant 50-ohm impedance provides excellent performance through X-band frequencies.

Quick-Crimp: gold-plated semi-captivated contacts, classed as weather proof. Heat shrink tubing for severe environmental conditions.

Original-Crimp: gold-plated contacts, classed as weatherproof. Each has a silicone rubber boot. For a complete listing of all BNC Connectors to the latest revision of MIL-C-39012/A, refer to your distributor or Amphenol.

ASTROplate®
Finish Available

Amphenol's exclusive, non-tarnish finish is available from stock on most popular rf connectors. **(See part numbers marked with ‡; others available on special order.)** ASTROplate® is corrosion and abrasion resistant. Mates safely with silver; is equally solderable. **To order: add suffix 1050 to part number.**

TNC RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

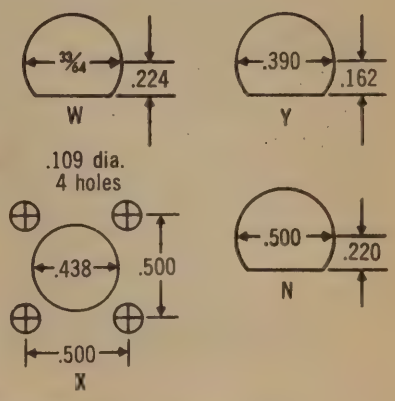
Threaded Coupling RF Connectors — TNC

TNC's were developed by Amphenol for aircraft, missile and other applications in which extreme vibration may be encountered. The TNC threaded coupling mechanism eliminates "rock" under vibration — a characteristic of bayonet coupled connectors such as BNC that introduces noise into the system and causes erratic performance. Other than coupling, TNC's are dimentionally and electrically similar to BNC, and have a constant impedance of 50 ohms.

Their rugged mechanical construction makes them an excellent choice for applications requiring a high degree of vibration.

ASTROplate® Finish Available

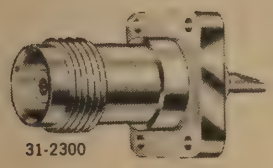
Amphenol's exclusive, non-tarnish finish is available from stock on most popular rf connectors. **(See part numbers marked with ‡; others available on special order.)** ASTROplate® is corrosion and abrasion resistant. Mates safely with silver; is equally solderable. **To order: add suffix 1050 to part number.**



CHARACTERISTICS

MECHANICAL: Mating: 7/16-28 thread coupling.

ALL OTHERS: Similar to BNC



Notes: GC - Gold-plated Contact; PM - Polarized Male Contact; PF - Polarized Female Contact; BOC - Beryllium Outer Contact; SW - Holes for Safety Wiring; H - Hermetically Sealed; FM - Front Mounting; T - Teflon; GT - Glass Teflon; P - Plug; J - Jack.

UHF RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

Series UHF

Series UHF are low-cost, general purpose connectors for use in a wide variety of lower frequency applications (up to 300 mc) where constant impedance is not necessarily required. Available in small and large body sizes, they have a peak voltage rating of 500 volts.

While most UHF connectors have conventional solder-type cable affixment, Quick-Crimp UHF feature Amphenol's patented hex crimp design which permits faster, easier and more reliable assembly.

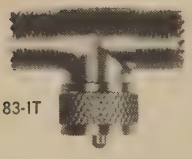
The 83-850 and 83-851 plugs eliminate one or both of two common soldering operations in assembly. The 83-850 has completely solderless braid and contact assembly; the 83-851 has solderless braid assembly.

CHARACTERISTICS

ELECTRICAL: Impedance: non-constant. **Frequency range:** 0-300 MHz. **Voltage rating:** 500v. peak.

ENVIRONMENTAL: Thermal limits: Teflon: —67°F to 390°F; Rexolite and polystyrene: —67°F to 185°F; mica-filled Bakelite: —67°F to 300°F. **Non-weatherproof,** except as noted.

MECHANICAL: Mating: 5/8-24 thrd. coupling (small body), 1-20 thrd. coupling (large body). **Cable affixment:** braid solder, Quick Crimp or Solderless.



MATERIAL: Contacts: male: brass; female: beryllium copper. **Bodies:** die cast zinc or brass. **Plating:** .0002" silver min. **Insulators:** Teflon, Rexolite, polystyrene or mica-filled Bakelite.

OTHER DATA: small and large body types do not intermate. UHF connectors ordered will be small size body unless large is specified.

ASTROplate® Finish Available

Amphenol's exclusive, new non-tarnish finish is available from Distributor stock on all of our most popular rf connectors. **(See part numbers marked with ‡; other numbers are available on special order).** ASTROplate® is corrosion, heat and abrasion resistant. Mates with silver without danger of galvanic reaction; has equal solderability to silver's. **To order: add suffix 1050 to part numbers indicated below.**

SERIES "C" RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

Series C

Constant 50-ohm impedance C series connectors are design-matched to 50-ohm cables. They may be used with 75-ohm cable, at lower frequencies (below 300 MHz) where the connector introduces no serious mismatch. Standard connectors have a peak voltage rating of 1500 volts and provide low SWR up to 10 GHz; 4000-volt units are also available with good performance up to 2 GHz. The improved cable clamp provides excellent cable grip and weatherproof seal with a minimum of cable indentation; it utilizes a "V" groove split silicone rubber gasket and peaked braid clam. Accessory Clamping Adapter Kits are available for metal jacketed cables (AK). For armored cables, see armor clamp (AC).

ASTROplate® finish available, add -1050 to part number.

CHARACTERISTICS

ELECTRICAL: Impedance: 50 ohm constant. **Frequency Range:** 0-10 GHz, 1,500 volt type; 0-2 GHz, 4,000 volt type. **Voltage Rating:** 1,500 volts peak—standard; 4,000 volts peak as noted. **Dielectric Withstanding Voltage:** 3,000 volts RMS, 1,500 volt type; 6,000 volts RMS, 4,000 volt type. **SWR:** 1.25.

ENVIRONMENTAL: Thermal Limits: —67° to 390°F (—55° to 199°C). **Weatherproof:** except as noted, all C Series connectors are Weatherproof. **Hermetic Seals:** pass helium leak test of 2×10^{-8} cc/sec. **Pressurized:** compression seal.

MECHANICAL: Mating: 2-stud bay net lock. **Cable Affixment:** Improved: screw-thread nut and braid clamp.

MATERIAL: Contacts: male: brass; female and outer: beryllium copper. **Other Metal Parts:** brass. **Plating:** .0002" silver min. **Insulators:** Teflon, glass-Teflon (herm. sealed). **Weatherproof Gaskets:** silicone rubber.

MILITARY SPECIFICATIONS: Meet applicable sections of MIL-C-3989.

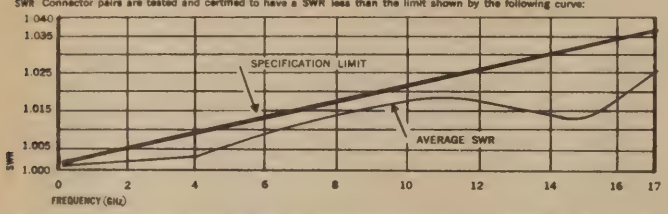
PRECISION RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

Series 131 Precision 7mm Connectors TWO DISTINCTLY DIFFERENT LINES

— APC-7 with sexless coupling



APC-7. Precision 50-ohm connector for use with 7mm (inner diameter of outer conductor) rigid air line and semi-rigid (ALJAK) coaxial cable.

Sexless coupling permits interconnection of any two APC-7's. Identical plane of electrical and mechanical contact permits accurate determination of the electrical length of a mated pair or of an air line assembly with a connector at each end. All components held captive.

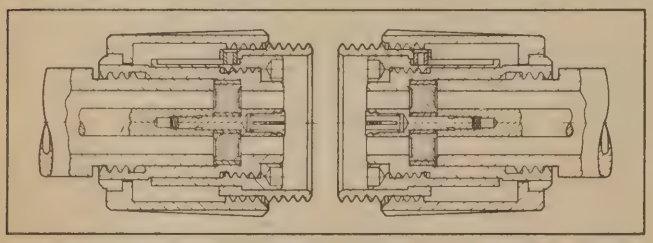
Connectors packaged in pairs in protective wooden box; assembly instructions and certified SWR test report included with each pair.

Specially designed for microwave and precision test equipment — Component manufacturers now using APC-7 fittings include: Alford, Alfred, EG&G, Hewlett-Packard, Maury Microwave, Microlab/FXR, Narda, PRD, Rantec, and Weinschel Engineering.

SWR Connector pairs are tested and certified to have a SWR less than the limit shown by the following curve:

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair): **Impedance:** 50 ohm ±0.1 ohms. **Frequency Range:** 0-18 GHz. **SWR:** 1.039 max. to 18 GHz. **Insertion loss (in db):** $< 7 \times 10^{-3} \sqrt{\text{Freq. GHz}}$ (example: 0.028 db at 16.0 GHz). **RF Leakage:** < signal inside coaxial line by ratio > 120 db▲. **Electrical length:** 0.723 ±0.001 inches (1.836 ±.00254 cm). **Contact Resistance:** inner: < 1.0 milliohm, outer: < 0.1 milliohm.



▲ RF leakage: Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

ENVIRONMENTAL: **Thermal Limits:** storage: −67° to 158°F (−55° to 70°C) operating: 55° to 91°F (13° to 33°C). **Humidity:** 20 to 80% RH. **Pressure:** 590 to 780 mm Hg. MECHANICAL: **Mating:** sexless, coplanar by means of threaded ring housed within coupling nut. **Life:** > 5000 connect/disconnect operations. MATERIAL: **Coupling Mechanism:** stainless steel. **Body:** gold plated beryllium copper. **Center Contact:** gold plated beryllium copper. **Bead Assembly:** Rexolite insulation.

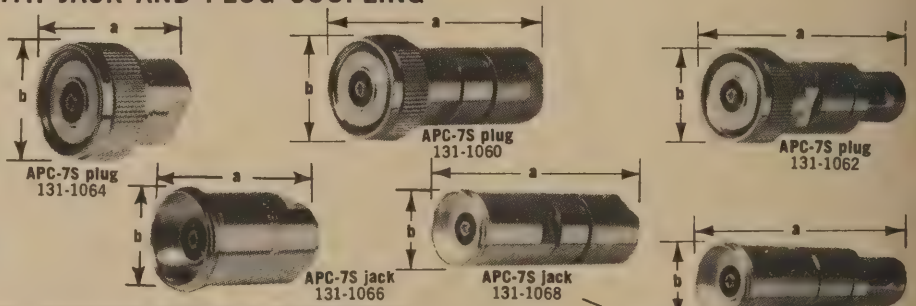
TOOL KIT 131-2025

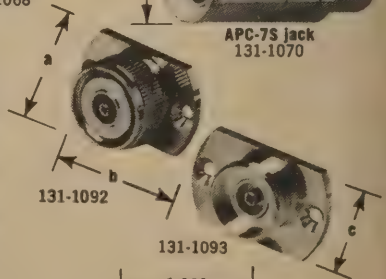
For disassembly; assembly to air line. Contains collet extractor, spanner wrench, torque wrench & line wrench.

APC-7 components. Both connectors are identical and completely sexless.



APC-7S components. Center contact, sexless; female threads on Jack; male coupling ring on Plug.

— APC-7S Economy Family WITH JACK AND PLUG COUPLING



APC-7S, the newest addition to Amphenol's expanding precision connector family was created to meet the need for an economical but equally reliable precision connector. Except for the coupling mechanism all other characteristics are identical to APC-7. Performance is equal, yet APC-7S costs almost two-thirds less than the original precision 7mm connector.

CHARACTERISTICS (Same as APC-7) except:)

MECHANICAL: Mating: 11/16-24 threaded coupling. APC-7S plus and jacks also mate with APC-7 connectors. **MATERIAL:** Same as APC-7 except: Coupling nut: nickel plated brass.

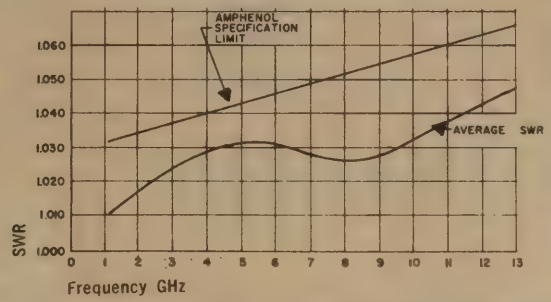
131-10005



131-10006

131-10003

131-10004

APC-N, 50-ohm connectors. Use interchangeably with APC-7; mate with all other type N's. Their excellent electrical performance will make them an "industry standard" for future equipment. SWR for mated pairs: only 1.06 through 12 GHz; 1.08 through 18 GHz.

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair APC-N connectors). **Impedance:** 50 ohm ±0.2 ohms. **Frequency Range:** 0-18 GHz. **SWR:** 1.08 max. to 18 GHz. **Insertion Loss (in db):** $< 3 \times 10^{-2} \sqrt{\text{Freq. GHz}}$. **RF Leakage:** < signal inside coaxial line by ratio > 90 db▲. **Contact Resistance:** inner: < 1.0 milliohm; outer: < 1.1 milliohm.

▲**RF Leakage:** Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

ENVIRONMENTAL: **Thermal Limits:** storage: −67 - 158°F (−55 - 70°C); operating: 55 - 91°F (13 - 33°C). **Humidity:** 20 to 80% RH. **Pressure:** 590 to 780 mm Hg.

MECHANICAL: **Mating:** 5/8-24 threaded coupling. Mating dimensions are MIL-C-39012 Class II nominal with tighter tolerances. The APC-N mates with all existing Type N connectors including MIL-C-71.

MATERIAL: **Body and Coupling Nut:** stainless steel. **Center Contacts:** gold plated beryllium copper. **Bead Assembly:** Rexolite Insulation.

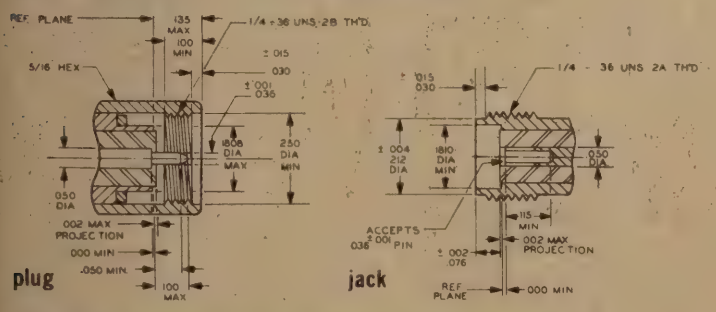
SMA Sub-miniature Semi-precision Coaxial Connectors

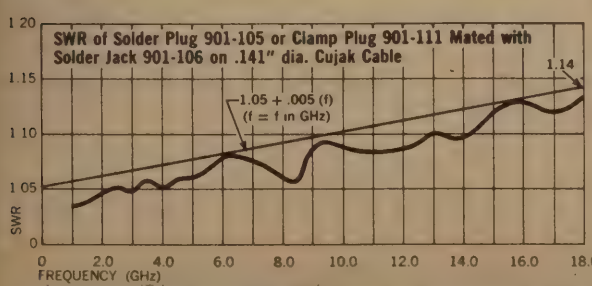
500 MATING CYCLES AND STILL REPEATABLE PERFORMANCE

Amphenol's SMA connector is a semi-precision, sub-miniature (3mm), high frequency connector giving repeatable electrical performance from DC to 18 GHz, with exacting mechanical integrity and simplified low-cost assembly.

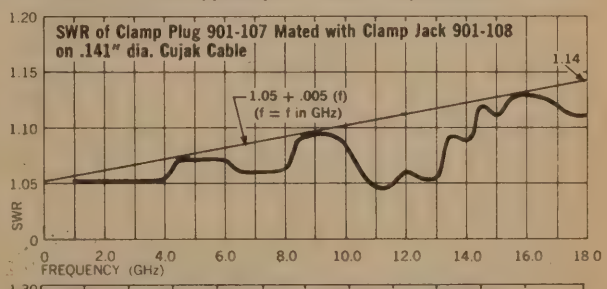
They are made of high strength, heat treated beryllium copper. Use of this alloy assures rugged mechanical performance, even though the "thin wall" design of the connector results in an interface mating cross-section area of only 0.00452 inch. The yield strength of the beryllium copper is three times that of stainless steel; use of this alloy also allows twice the coupling nut torque of other SMA designs. The "thin wall" design approach assures better compatibility with existing SMA designs, semi-rigid cable and the standard adapter connector specified by MIL-C-39012.



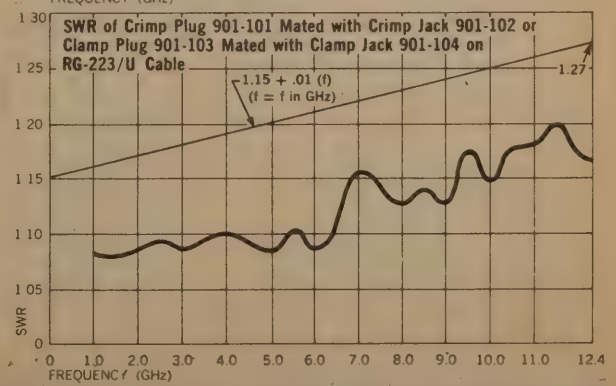
Electrical Performance Improved. Since the new connectors perform well mechanically, excellent electrical performance, even after 500 mating cycles, is assured. For example, the maximum SWR for a mated pair of Amphenol SMA solder type for 0.141 inch semi-rigid cable is 1.09 to 12.4 GHz and 1.13 through 18 GHz. This is below the limit of 1.05 plus 0.005f (GHz) as specified in MIL-C-39012 for SMA connectors.



Low Cost Assembly. All Amphenol SMA connectors can be assembled with a $12.50 tool kit. In addition, "factory assembled subassemblies" reduce the number of parts that have to be handled. The 0.141 inch semi-rigid Cujak cable solder connector which uses the cable as a contact and insulator has only one part; the solder and clamp type containing contact and insulator have four parts. The larger diameter flexible cable connectors such as RG-58, 223 — crimp type has three parts; clamp type five parts. Sub-miniature flexible cable such as RG-174, 188 and 195 — clamp connector has a unique patented design allowing for only three parts.



Wide Variety Available. For the popular 0.141 inch semi-rigid Cujak cable, solder and clamp types, straight and right angle plugs and jacks are available. For sub-miniature 0.085 inch semi-rigid Cujak, there is a complete line of solder type connectors. For flexible cables, both standard and sub-miniature, crimp and clamp type plugs and jacks are included plus a complete line of receptacles, including stripline, hermetic seal, P.C. mount, two-hole trim-line flange, and right angle. Between Series Adapters for BNC, TNC, APC-7 and Precision N connectors, along with a complete line of Within Series Adapters.



Cable Assemblies. Custom designed cable assemblies for semi-rigid 0.141 and 0.085 Cujak cable and all flexible coax cables fitted with SMA or any other RF connector can be supplied per customer requirements.

27 SERIES SUBMINAX RF COAXIAL CONNECTORS

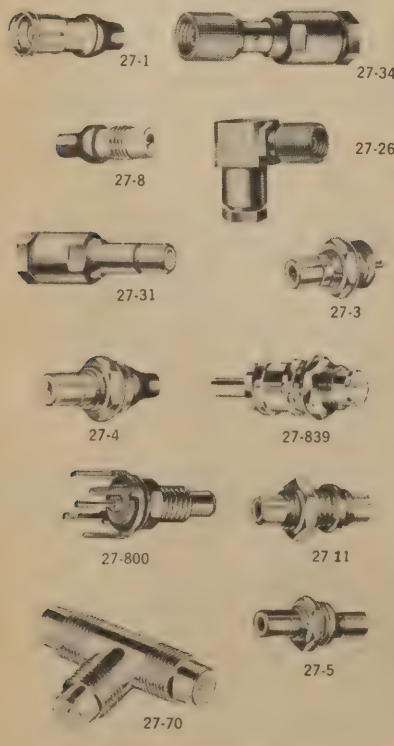
BUNKER RAMO AMPHENOL

Series 27 — SUBMINAX with three types of low cost assembly

The original **quality** rf subminiature, designed for more critical electrical applications. These connectors are available in three types of cable affixment: **Radial Crimp,** a unique Amphenol low cost crimp design; **Quick Crimp,** a standard tex type crimp; and **Field Serviceable,** a design which is the easiest in the industry to assemble and contains the fewest parts. All have soldered centered contacts.

Two types of coupling mechanism. Specify push-on (snap-on) for frequent fast mating or screw-on for vibration type applications.

CHARACTERISTICS



ELECTRICAL: **Impedance:** 50 ohm, 75 ohm. **Frequency Range:** 0-10 GHz. **Voltage Rating:** 500 volts peak. **Dielectric Withstanding Voltage:** 1,500 volts rms. **SWR (50 ohm):** 1.2 (0-4 GHz); 1.5 (4-10 GHz); 1.3 (UG's) (0-6 GHz); 1.5 (UG's) (6-10 GHz). **Other:** multivolt drop 6 MV. insulation resistance 1,000 megohms.

ENVIRONMENTAL: **Thermal Limits:** −67° to 390°F (−55° to 199°C). **Weatherproof:** all 27 series are non-weatherproof, radial crimp have plastic boot or optional heat shrink tubing. **Hermetic Seals:** pass helium leakage test of 2 x 10^{-8} cc/sec. **Thermal Shock.** Mil. Std. 202 method 107. **Shock:** Mil. Std. 202 method 202. **Vibration:** Mil. Std. 202 method 204 (test cond. D). **Moisture Resistance:** Mil. Std. 202 method 106A. **Corrosion:** Mil. Std. 202 method 101 (test cond. B).

MECHANICAL: **Contacts:** radial crimp, not captivated; quick crimp, full captivated; field serviceable, semicaptivated. **Mating:** push-on (snap-on) and screw-on, (50 ohm have 10-32 threaded coupling; 75 ohms, 5/16-32). **Cable Affixment (Braid or Jacket):** radial crimp: Quick-Crimp (hex crimp); field serviceable clamp mechanism. **Cable Affixment (Center Conductor):** solder only. **Coupling Nut:** recommended torque (hex nuts); 50 inch-ounces. Axial pull-off force: Withstand up to 50 lbs.

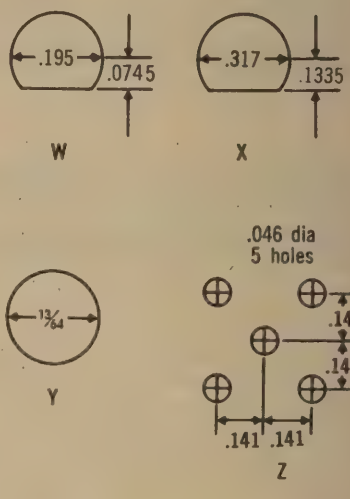
MATERIAL: **Contacts:** male and outer (push-on): brass female: beryllium copper. **Other Metal Parts:** brass. **Plating (All Metal Parts):** .000050 gold over copper, (UG's .0001" gold over copper). **Insulators:** Teflon, Kel-F-Teflon, glass Teflon (hermetically sealed) as specified.

MILITARY SPECIFICATIONS: UG items fully comply with MIL-C-22557A.

NOTES:

Radial Crimp:

Connector is gently squeezed for a reliable mechanical and electrical connection. See "RC" in notes below.



Quick Crimp:

No need to comb braid; assembles faster than any other subminiature. Has captivated contact, termination stronger than cable itself. See "QC" in notes below.

Field Serviceable:

Needs no crimping tool. Has semi-captivated contact. UG connectors comply with MIL-C-22557A. See "FS" below.

CC = Captivated Contacts; HOC = Hooded Outer Contact; RM = Rear Mounted.

5116 SERIES SUBMINAX RF COAXIAL CONNECTORS

BUNKER RAMO AMPHENOL

Series 5116 — SUBMINAX with low cost QUICK CRIMP assembly

WITH TWO MATING STYLES — FULLY CAPTIVATED CONTACTS

Series 5116 combines good electrical performance with fast, economical cable assembly. Plugs and jacks, for example, have only four parts, including body assembly. Cable stripping is easier, with less critical dimensions. Ultra-reliable, gold-plated contacts are fully captivated, can be crimped or soldered. Extremely low cost of the crimping tool (Amphenol No. 227-911) makes field use of this connector series feasible.

Two types of coupling mechanism are available. Specify push-on (snap-on) for frequent fast mating, or screw-on for vibration-applications. Push-on will not mate with screw-on types; 50 ohm, 75 ohm and 95 ohm types mate only with like types.

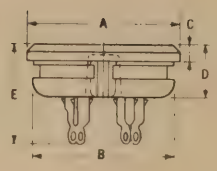
TUBE/RELAY SOCKETS

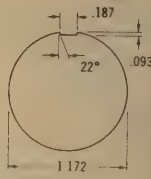


AMPHENOL
THE BUNKER-RAMO CORPORATION

"S" Type Tube Sockets WITH RETAINER RING MOUNTING

These quick-mounting sockets use no screws or rivets; they are securely held by the retainer ring and can be easily mounted with a screwdriver or AMPHENOL hand tool 51-3.

"S" type sockets may also be used with plug caps to make up high quality, low cost cable connections.



SPECIFY CHASSIS THICKNESS. Unless otherwise specified, "S" type sockets are grooved to fit 22 gauge (.031") to 18 gauge (.050") panels or chassis. This standard grooving also fits plug caps. They can be grooved to fit up to 13 gauge (.093").

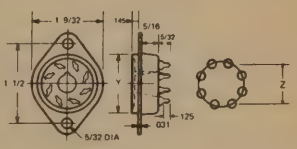
TUBE/RELAY SOCKETS

AMPHENOL
THE BUNKER-RAMO CORPORATION

NEW! Standard 78S and 77MIP Series Sockets FOR PC BOARD INSTALLATION



Rugged copper alloy contacts, 5/32" long, have .125" tapered lead-in sections for quick insertion in plated-through holes in circuit boards. Broader shoulder section allows .020" clearance for air circulation.

To order: Add suffix "W0125" to part number. Where strain on terminals is expected use MIP style with screws and standoffs. For extra insulation and dielectric strength add letter "T" to number. EX: 77MIP8*TW-0125*.

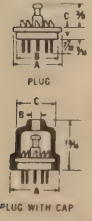
To meet customer requirements for low cost terminations, Amphenol introduces miniature sockets for PC board mounting and Wire Wrap termination. These sockets can be used for vacuum tubes, relays, input or output cable connections and many other circuit requirements where standard size sockets won't fit. Performance is equal to larger sockets; general purpose or mica-filled dielectric available. Wire-wrap termination type mounts in ⅝" diameter round or D shaped panel cut out; friction-type retainer ring included. PC board types mount through 1/16" diameter holes in PC board arranged in proper pin circle diameter as shown above.

Contact shoulders prevent socket from bottoming, allow clearance for air circulation and cleaning.

"CP" Type Plugs with Retainer Ring Mounting

Plugs with 4, 5, 6, and 7 contacts do not have center guide post but are polarized for correct insertion by use of two pins of larger diameter than others.



Molded-in contacts are nickel plated brass. Standard dielectric is black phenolic, but all sizes are available also in mica-filled phenolic. To order, just add T to the part number — for example, 86-CP8T.

PRINTED CIRCUIT EDGE CONNECTORS

PRECISION MILITARY AND COMMERCIAL PRINTED CIRCUIT BOARD EDGE CONNECTORS

0.156" LEAD SPACING, 1/16" BOARDS

These Cinch printed circuit connectors are designed for minimum printed circuit card wear, low insertion force and positive contact with the printed circuit board. **Insulation is glass-filled diallyl phthalate,** type SDG-F per MIL-M-14. **Contacts are of phosphor bronze** with a minimum of 30 micro-inches thickness gold plate. Units with solder tab or dip solder terminations utilize bifurcated contacts permitting two flexing surfaces instead of one for positive contact. Bifurcated contacts are especially recommended for added conact reliability where vibration or printed circuit board irragularities would otherwise cause trouble. Types meeting Military Specification MIL-C-21097B are also available as indicated. These connectors have beryllium copper contacts with 50 micro-inches gold finish.

Card Guide 50-GP-1 on page 4 can be used with all connectors on this page except floating bushing types.

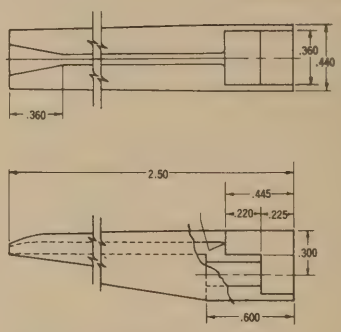
PRINTED CIRCUIT EDGE CONNECTORS (Cont'd)



PRECISION DOUBLE READ-OUT PRINTED CIRCUIT BOARD EDGE CONNECTORS WITH 0.100 INCH CENTERS, 1/16" BOARDS

This new connector series features a unique bifurcated cantilever contact construction that provides a simple, dependable design capable of handling 1/16" thick printed circuit boards. These contacts are pre-loaded against an insulator stop to provide gap uniformity and assure rapid build-up of force to the PC board. This design combines minimum insertion force with maximum contact pressure.

Contacts are fabricated from grade A phosphor bronze, selectively gold plated with 30 micro-inches of gold over 50 micro-inches of nickel in the contacting area and 10 micro-inches minimum gold on the remainder of the contact, per MIL-G-45204, Type II. Insulation is glass-filled diallyl phthalate, type SDG-F per MIL-M-14.

Card Guide 50-GP-1 Factory No. 474-11-90-259 can be used with 0.156" spacing connectors on page 2.

ECONOMY 22-POSITION DOUBLE READ-OUT PRINTED CIRCUIT BOARD EDGE CONNECTORS WITH 0.156" CENTER WIRE WRAP* TERMINALS

Similar to the precision edge connectors described above, these feature cantilever contact construction, selectively gold plated with 30 micro-inches of gold over 50 micro-inches of nickel in the contacting area and 10 micro-inches minimum of gold on the balance at the contact. The insulator is precision fabricated from black colored general purpose impact phenolic.

The selective plating technique used on the contact provides the performance of a 30 micro-inch plating at a substantially reduced cost. These connectors have .031" x .062" terminals and are available in three terminal lengths to accommodate one, two, or three levels of wire wrap.

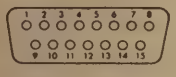
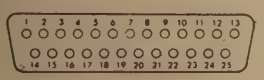
D-SUBMINIATURE CONNECTORS†

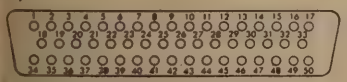
The Cinch D Subminiature Connectors are designed for applications where space and weight are prime considerations. These high contact density connectors are especially well-suited for aircraft, missile and ground support installations. Although designed essentially for rack-and-panel installations, D series connectors may be adapted for cable attachment by means of accessory junction shells with integral clamps.

In addition to the original D series with two-piece insulators, Cinch offers Golden D and MARK III ROYAL D connectors utilizing monobloc insulators. The Golden D connector is available with either crimp-type, snap-in, removable contacts or standard solder pot contacts. MARK III ROYAL D connectors have the "Little Caesar" rear release contact assembly. Contacts are inserted by hand and extracted at the rear of the connector with a simple plastic tool. The "Little Caesar" contact assembly was selected by the National Aerospace Standards Committee for vital programs demanding great operational reliability.

All D Subminiature connectors will inter-mate if insert arrangements correspond. These connectors are designed to meet or exceed most of the requirements of MIL-C-8384 Rev. B.







Combination layouts are supplied with unfilled coaxial and/or HV contact cavities. Coaxial and HV contacts must be ordered separately, and may be used interchangeably in any of the layouts listed. HV contacts accommodate wire sizes up to #20. Coaxial contacts (with crimp or solder type terminations) and HV contacts are snap-in and removable. Solder type coaxial and HV contacts have captivated center contacts.

Royal D, Mark III and Golden D, Mark II contacts use crimp tool MS-3191-1. Extraction tool 599-11-11-150 is used with each Royal D, Mark III commercial connectors; insertion-extraction tool 599-11-11-165 is used with each military connector.

For detailed test data and technical information see Cinch Catalog C-46.

"JONES" PLUGS and SOCKETS — 300 SERIES

Jones 300 series plugs and sockets feature MONOBLOCK construction. S-302-AB socket (two-contact plugs and sockets are round, and all others are rectangular). Which eliminates internal moisture traps. MONOBLOCK's new patented* snap-in socket contacts permit external pre-wiring, plus removal and replacement of individual contacts if necessary. Contacts are "locked-in" to withstand wiring stress. MONOBLOCK plugs and sockets are compatible with the old two-piece types.

* U.S. patent nos. 2688123 and 2980881.

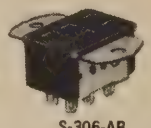
ELECTRICAL SPECIFICATIONS

All connector ratings are based on a continuously mated condition. "Rated Voltage" is ⅓ of Voltage Breakdown.

Rated Voltage ..... 730 Volts rms. Contact Resistance .... .016 Ohms max.

Under most normal operating conditions where not all contacts are carrying substantially full rated current, maximum current per contact is rated at 10 amperes. The Jones 300 series plugs and sockets are recognized under the Component Program of Underwriters' Laboratories, Inc. in accordance with UL Standard #498, the Underwriters' Laboratories ratings are derived from the condition whereby all contacts are carrying "rated" current simultaneously. The resultant ratings are as follows:

Rated Current	Rated Wattage
(2-12 contacts) ..... 7.5 amperes	(2-12 contacts) .....1875 watts
(15-33 contacts) ..... 4.5 amperes	(15-33 contacts) .....1125 watts



MECHANICAL SPECIFICATIONS

INSULATOR: Molded phenolic;; CONTACTS: Phosphor bronze, cadmium plated; HOUSING: Formed metal, black wrinkle finish.

400 series and 2400 series plugs and sockets are suitable for cap or panel mounting. Plug prongs are cadmium plated brass. Caps are finished in black wrinkle and equipped with a fibre lining. 400 series and 2400 series plugs and sockets are intermatable.
A special bracket, Type 46, is supplied for mounting the 2-contact angle bracket (AB) type socket to a panel or chassis.

Series 2400 plugs and sockets have recessed pockets with barriers around the contacts, both on the mating side and the solder connecting side. A shoulder extends around the face (mating) side of both plug and socket presenting a finished appearance when mounted in bracket or cap. Angle brackets can be ordered as specials for the 2400 Series.

SERIES 500

The new 500 series Jones Barrier Terminal Blocks are designed for applications where electrical and mechanical performance requirements are especially critical. Bottoms are closed so that insulating strips are not required. Knockouts are molded into the base so that Y terminals can be accommodated if desired. A top-mounted marker strip can be furnished as described on page 17.

TO-5. or TO-18*, LOW PROFILE TRANSISTOR SOCKETS

Mount directly to the PC board with a snug fit to prevent bleeding of solder and flux to the opposite board surface. Chamfered socket holes minimize lead bending during insertion. Contact ends are formed and watertight, so that solder and fluxes cannot enter the barrelled contact to obstruct lead entry.

*Directly accept TO-5; accept TO-18 with full length or formed heads.

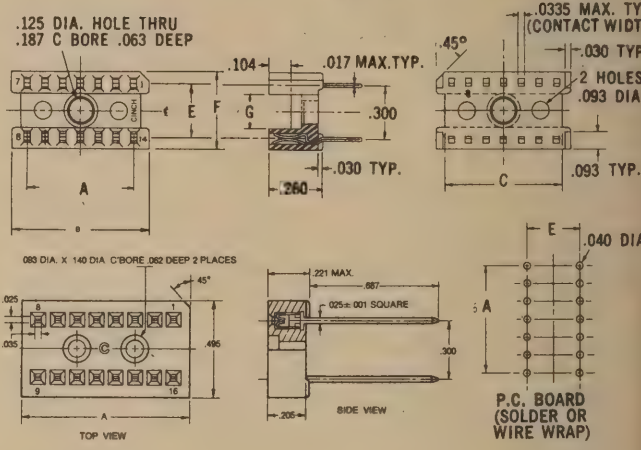
INTEGRATED CIRCUIT SOCKETS

Cinch IC sockets are ideal for testing and prototype purposes as well as production applications. Convenient and dependable, these sockets reduce the possibility of damage to leads and hermetic seals. Cinch IC sockets provide positive electrical contact and low contact resistance. They offer excellent resistance to corrosive atmosphere and to extremes in temperature and humidity.

PRECISION DIP SOCKETS — DIP SOLDER TAILS

These sockets combine high contact retention with low contact resistance and high environmental stability. They accept standard 14, 16 and 24-pin dual-inline packages having round or flat leads. (Standard spacing is .300" between lead rows and .100" between lead centers.) Socket leads are on the same centers as the D.I.P. itself. This feature allows easy installation of the socket in PC boards designed for direct insertion of the D.I.P. Choose between diallyl phthalate insulators with gold plated beryllium copper contacts or GP black phenolic insulators with electro-tin plated beryllium copper contacts.

MATERIALS



INSULATORS: GP Black Phenolic per MIL-M-14, type CFG Diallyl Phthalate per MIL-M-14, type SDG; CONTACTS: Beryllium copper with gold or electro-tin plating. **RECOMMENDED MOUNTING METHODS:** CHASSIS: 4-40 x ¼" Fillister head screw; P. C. BOARD: Solder in.

ELECTRICAL SPECIFICATIONS
